## PREFACE

This report was prepared by the Geological Survey in the Water Resources Division, L. B. Leopold, chief. The streamflow records were prepared under the general direction of J. V. B. Wells, chief, Surface Water Branch, and F. J. Flynn, chief, Basic Records Section, the data being collected and computed under the supervision of R. E. Marsh, district engineer, Surface Water Branch, Juneau, Alaska. The quality of water records were prepared under the general direction of S. K. Love, chief, Quality of Water Branch, and W. H. Durum, chief, Reports Section, the data being collected and computed under supervision of F. B. Walling, district chemist, Quality of Water Branch, Palmer, Alaska.

## QUANTITY AND QUALITY OF SURFACE WATERS OF ALASKA, 1957

---

### SCOPE OF WORK

This volume contains results of measurements of the flow and the chemical and physical quality of streams in the Territory of Alaska during the water year ending September 30, 1957. Since the beginning of stream-gaging work in Alaska in 1906, records of flow of streams and ditches have been obtained at about 320 gaging stations for periods ranging from a few months to 40 years. On Sept. 30, 1957, the Geological Survey was maintaining 61 gaging stations. Discharge measurements only were made at many other points in the 1957 water year; these are published near the end of the report.

Prior to 1948, records of chemical and physical composition of surface waters in Alaska consisted of a few turbidity measurements of the Copper River near Copper Center, in 1913, and chemical analyses of some surface waters of the Seward Peninsula, in 1914, of Yukon River basin, in 1915, and of the Yukon River at Anvik, 1915 to 1916. In 1948 a continuing chemical-quality program was started by the Geological Survey. Several miscellaneous samples were collected and analyzed that year, and regular sampling stations were established in 1949. During the 1957 water year records of chemical composition of surface waters were obtained at about 69 sites including 5 sites at which daily samples were collected during the open-water period. Sediment records were obtained at 9 sites during the same period.

### COOPERATION

Assistance in the form of funds or services was given by the Corps of Engineers, Department of Army, in collecting streamflow records published herein for 5 gaging stations.

Assistance was also furnished by the Bureau of Reclamation of the United States Department of the Interior in the operation of one gaging station.

The city of Seward financed the operation of one gaging station.

### DIVISION OF WORK

The stream-gaging work was done by the Water Resources Division of the Geological Survey under the direction of the personnel shown in the preface. The streamflow data were collected and prepared for publication in the Surface Water Branch district office, the address of which is 117 Federal and Territorial Building, Juneau.

The collection of samples for chemical and suspended sediment analyses and water-temperature measurements was under the direction of personnel of Quality of Water Branch assisted by the Surface Water Branch. Chemical and sediment analyses, computation of data, and preparation of records was done by the Quality of Water district office, Palmer, Alaska.

Information of a more detailed nature than that published for most of the gaging stations or sampling stations given in this report is on file in the district offices shown above. Provisional records of discharge prior to publication and other unpublished data concerning the records may usually be obtained from the district offices.

## DEFINITION OF TERMS AND ABBREVIATIONS

The terms of streamflow and other hydrologic data, as used in this report, are defined as follows:

Cubic foot per second (cfs) is the rate of discharge of a stream whose channel is 1 square foot in cross-sectional area and whose average velocity is 1 foot per second.

Cubic feet per second per square mile (cfs/m) is the average number of cubic feet of water flowing per second from each square mile of area drained, assuming that the runoff is distributed uniformly in time and area.

Runoff in inches is the depth to which an area would be covered if all the water draining from it in a given period were uniformly distributed on its surface. The term is used for comparing runoff with rainfall, which is also usually expressed in inches.

Acre-foot is the quantity of water required to cover an acre to the depth of 1 foot and is equivalent to 43,560 cubic feet. The term is commonly used in relation to storage for irrigation.

Cfs-day is the volume of water represented by a flow of 1 cubic foot per second for 24 hours. It is equivalent to 86,400 cubic feet, 1,983,471 acre-feet, or 646,317 gallons, and represents a runoff of 0.0372 inch from 1 square mile.

Stage-discharge relation is the relation between gage height and the amount of water flowing in a channel, expressed as volume per unit of time.

Control designates a feature downstream from the gage that determines the stage-discharge relation at the gage. This feature may be a natural constriction of the channel, a long reach of the channel, or an artificial structure.

The drainage area of a stream at a specified location is that area, measured in a horizontal plane, which is so enclosed by a topographic divide that direct surface runoff from precipitation normally would drain by gravity into the river above the specified point. Figures of drainage area given herein include all closed basins, or noncontributing areas, within the area unless otherwise noted.

WSP is used as an abbreviation for "Water-Supply Paper" in references to previously published reports.

Part per million (ppm) is a unit weight of constituent in a million unit weights of solution. The unit has a slightly different meaning when applied to sediment concentrations. A part per million of sediment is computed as one million times the ratio of the weight of sediment of the weight of water-sediment mixture.

Hardness as CaCO<sub>3</sub> is the calcium and magnesium expressed as an equivalent amount of calcium carbonate.

Carbonate hardness is the hardness caused by calcium and magnesium equivalent to the carbonate and bicarbonate.

Noncarbonate hardness is the hardness caused by calcium and magnesium in excess of the carbonate hardness.

Particle-size analyses are expressed in percentages finer than indicated sizes in millimeters. The size classification used in this report is that recommended by the American Geophysical Union Subcommittee on sediment terminology.<sup>1</sup>

Specific conductance (micromhos at 25°C) is one million times the reciprocal of specific resistance, at 25°C. Specific resistance is the resistance in ohms of a column of water 1 cm long and 1 square cm in cross section.

<sup>1</sup>Lane, E. W., et al., 1947, Report of the Subcommittee on Terminology: Am. Geophys. Union Trans., V. 28, p. 937.

Suspended sediment or suspended load is sediment that moves in suspension in water and is maintained in suspension by the upward components of turbulent currents or as a colloid. Daily sediment loads are expressed in tons per day, and except for subdivided days are usually obtained by multiplying daily mean sediment concentration in parts per million by the daily mean discharge, and the appropriate conversion factor, normally 0.0027.

pH is the negative logarithm of the hydrogen-ion concentration expressed in grams-moles per liter. However, when determined with a pH meter, which is the procedure normally used in Geological Survey laboratories, pH is an expression of the hydrogen-ion activity or the effective hydrogen-ion concentration.

#### DOWNTSTREAM ORDER OF LISTING GAGING AND SAMPLING STATIONS

Gaging and sampling stations in this report are listed in a downstream direction along the main stem. All stations on a tributary entering above a main-stem station are listed before that station. If a tributary enters between two main-stem stations, it is listed between them. A similar order is followed in listing stations on first rank, second rank, and other ranks of tributaries. To indicate the rank of any tributary on which a gaging or sampling station is situated and the stream to which it is immediately tributary, each indentation in the listing of stations in the table of contents of this report represents one rank. This downstream order and system of indentation show which gaging or sampling stations are on tributaries between any two stations on a main stem and the rank of the tributary on which each station is situated.

#### EXPLANATION OF DATA

##### SURFACE WATER

The base data collected at gaging stations consist of records of stage and measurements of discharge. In addition, observations of factors affecting the stage-discharge relation, weather records, and other information are used to supplement base data in determining the daily flow. The records of stage are obtained either from direct readings on a nonrecording gage or from a water-stage recorder that gives a continuous record of fluctuations. Measurements of discharge are made with a current meter by the general methods adopted by the Geological Survey on the basis of experience in stream gaging since 1888. These methods are described in Water-Supply Paper 888 and are also outlined in standard textbooks on the measurement of stream discharge.

Rating tables giving the discharge for any stage are prepared from stage-discharge relation curves defined by discharge measurements. If extensions to the rating curves are necessary to define the extremes of discharge, they are made on the basis of indirect determinations of peak discharge (such as slope-area or contracted-opening determinations, computation of flow over dams or weirs, and by other methods), velocity-area studies, and logarithmic plotting. The application of the daily mean gage height to those rating tables gives the daily mean discharge, from which the monthly and the yearly mean discharge are computed. If the stage-discharge relation is subject to change because of frequent or continual change in the physical features that form the control, the daily mean discharge is determined by the shifting-control method, in which correction factors based on individual discharge measurements and notes by engineers and observers are used in applying the gage heights to the rating tables. If the stage-discharge relation for

a station is temporarily changed by the presence of aquatic growth or debris on the control, the daily mean discharge is computed by what is essentially the shifting-control method.

At many gaging stations in Alaska the stage-discharge relation is affected by ice during the winter, and it becomes impossible to compute the discharge in the usual manner. Discharge for periods of ice effect is computed on the basis of the gage-height record and occasional winter discharge measurements, consideration being given to the available information on temperature and precipitation, notes by gage observers and engineers, and comparable records of discharge for other stations in the same or nearby basins. If the stage-discharge relation is affected by ice, this information is given in a note to the table. No mention is made of occasional days of ice effect if the degree of accuracy of daily records is not changed.

The streamflow data presented herein comprise a description of the station and a table showing the daily discharge and the monthly and yearly discharge and runoff of the stream. Records are published on basis of the water year which begins on October 1 and ends on September 30.

The description of the station gives the location, drainage area, records available, type and history of gages, average discharge, extremes of discharge, general remarks, and notations of revisions of the previously published record. The location of the gaging station and the drainage area are obtained from the most accurate maps available. Under "Records available" are given the periods for which there are published records generally equivalent to those at the present site. Under "Gage" are given the type of gage currently in use and the datum of the present gage above mean sea level, and a condensed history of the types, locations, and datums of previous gages used during the period of records available. Under "Average discharge" is given the average discharge for the number of years indicated. It is not given for stations having fewer than five complete years of record or for stations where changes in water development during the period of record cause the figure to have little significance. Under "Extremes" are given the maximum discharge and gage height; the minimum discharge if there is little or no regulation; the minimum daily discharge if there is extensive regulation (also the minimum discharge if useful); and the minimum gage height (unless it is of no importance). In the first paragraph the data given are for the complete current year unless otherwise specified. In the second paragraph the data given are for the periods of record within the calendar year dates in the heading (not necessarily those for the complete years indicated by the heading dates). Reliable information concerning major floods that have occurred outside the period of record are given in the third or last paragraph under "Extremes." Unless otherwise qualified, the maximum discharge corresponds to the crest stage obtained by use of a water-stage recorder, a crest-stage indicator, or a nonrecording gage read at the time of the crest. If the maximum gage height did not occur at the same time as the maximum discharge, it is given separately. Information pertaining to the accuracy of the records and conditions which affect the natural flow at the gaging station is given under "Remarks."

Previously published records of some stations have been found to be in error on the basis of data or information later obtained. Revisions of such records are usually published in a subsequent report. In order to make it easier to find such revised records, a paragraph headed "Revisions (water years)" has been added to the description of all stations for which revised records have been published. In this paragraph are listed the

reports in which revisions of daily discharge have been published, each followed by the water years for which figures are revised in that report. In listing the water years only one number is given; for instance, 1933 stands for the water year October 1, 1932, to September 30, 1933. If no daily, monthly, or annual figures of discharge are concerned in the revision, that fact is brought out by notations after the year dates as follows: "(M)" means that only the instantaneous maximum discharge was revised; "(m)" that only the instantaneous minimum was revised; and "(P)" that only peak discharges were revised. For stations in Alaska, however, monthly discharge for all stations prior to October 1950, were published in Water-Supply Paper 1372. Revisions of many monthly discharges as well as of previously published daily discharges were included in that report. The periods for which monthly discharge only is available and published in Water-Supply Paper 1372, are noted in the "Records available" paragraph. Therefore, the years for which revisions of monthly discharge only were made are not indicated under the "Revisions (water years)" paragraph. If the drainage area has been revised, the report in which the revised figure was first published is given. It should be noted that for all stations for which cubic feet per second per square mile and runoff in inches are published, a revision of the drainage area necessitates corresponding revision of all figures based on the drainage area. Revised figures of cubic feet per second per square mile and runoff in inches resulting from a revision of the drainage area only are usually not published.

For stations equipped with water-stage recorders, except those on streams subject to sudden or rapid fluctuation, the daily table gives the discharge corresponding to the daily mean gage height. For stations subject to such fluctuation the daily mean gage height may not indicate the true daily mean discharge, which must be obtained by averaging the discharge for parts of the day. For stations equipped with nonrecording gages, the table of daily discharge gives the discharge corresponding to once-daily readings of the gage, or to the mean of twice-daily readings, or to the mean gage height determined from gage-height graphs based on gage readings. For periods of rapidly changing stage, the daily mean discharge is determined from gage-height graphs based on gage readings, the frequency of which is stated in the station description.

In the table of daily discharge, the figures for the maximum day and the minimum day for each month are underlined. If the figure is repeated, it is underlined only on the first day of its occurrence.

In the monthly summary below the daily table, the line headed "Total" gives the sum of the daily figures; it is the total cfs-days for the month. The line headed "Mean" gives the average flow in cubic feet per second during the month. Runoff for the month may be expressed in cubic feet per second per square mile (line headed "Cfsm"), or in inches (line headed "In."), or in acre-feet (line headed "Ac-ft"). Figures of cubic feet per second per square mile and runoff in inches are omitted if the drainage area includes large noncontributing areas, or if the average annual rainfall over the drainage basin is usually less than 20 inches.

In the yearly summary below the monthly summary, the figures of maximum are the maximum daily discharges, not the momentary discharges when the water was at crest stage. Likewise, the minimums in this summary are the minimum daily discharges.

Peak discharges and the times of their occurrence and corresponding gage heights of most stations are listed below the table of daily and monthly discharge. All independent peaks above the selected base are given. The base discharge, which is given in

parentheses, is selected so that an average of about three peaks a year will be presented. Peak discharges are not published for canals, ditches, drains, or for any stream for which the peaks are subject to substantial control by man.

Footnotes to the table of daily discharge indicate periods when discharge was computed or estimated by unusual or special methods during periods of no gage-height record and ice effect, or by other effects that reduce the degree of accuracy of the records. Days on which discharge measurements were made are indicated by asterisk and footnote unless they were made at frequent regular intervals, in which instance the general frequency of discharge measurements is given under "Remarks" in the station description.

#### QUALITY OF WATER

In general samples for chemical analysis were collected daily at five of the regular sampling stations during the open-water period, and periodically during the period of ice cover. For the daily stations analyses were made of 10-day composites of daily samples. Three composites were prepared each month by combining equal volumes of daily samples collected from the 1st to the 10th, from the 11th to the 20th, and for the remainder of the month. Samples were collected less frequently at many other stations in Alaska.

Samples collected for chemical analysis were analyzed according to methods regularly used by the Geological Survey. The methods are essentially the same as or are modifications of methods described in authoritative publications, for mineral analysis of water.<sup>1, 2</sup>

The value reported for dissolved solids is usually the residue on evaporation after drying at 180°C for 1 hour. Specific conductance is given for most of the analyses and was determined by means of a conductance bridge using a standard potassium chloride solution as reference.

The streamflow data are reported in two ways: For regular daily stations the daily mean discharge is reported, whereas values given for discharge in the tables of miscellaneous analyses are normally the discharge at the time the sample was collected.

Suspended-sediment samples were collected daily during the open-water season at 4 stations, and periodically at 5 stations. Samples were collected periodically during periods of ice cover at all stations. Daily samples were collected with a US D-49 depth-integrating sampler from a fixed point at one vertical in the cross section. Depth-integrated samples at three or more verticals in the cross section were collected periodically at all sediment stations. Occasionally point-integrated samples were taken with a US P-46 sampler.

Sediment concentrations were determined by weighing the solid residue after filtration or evaporation of the samples. For stations where samples were collected periodically, the concentrations reported are instantaneous concentrations or concentration of composites of several samples. For regular daily stations daily mean concentrations were obtained for the periods during which samples were taken, by plotting the instantaneous concentration on a copy of the gage-height-recorder chart. The plotted concentrations were connected by a continuous curve. Daily mean concentrations were estimated from

<sup>1</sup> American Public Health Assoc., Standard methods for the examination of water and sewage, 9th ed. p. 1-112, 1946.

<sup>2</sup> Collins, W. D., Notes on practical water analysis; U. S. Geological Survey Water-Supply Paper 596-H, 1928.

the graph. Footnotes to daily values in the tables are used to indicate methods of computation.

In addition to sediment concentrations and loads, records of particle size are reported also for most of the sediment stations. Generally particle size was determined by a combination of sieve analysis and bottom-withdrawal tube analysis (U. S. Inter-agency, 1943). Sizes larger than 0.062 mm (sand-size) were determined by sieve analysis and those smaller than 0.062 mm were determined by bottom-withdrawal tube or pipette analysis. Native or distilled water, as noted in the tables of analyses, was used as the settling medium. Usually distilled water with a dispersing agent was used. Results obtained with distilled water and a dispersing agent as a settling medium approximate the ultimate particle size of the finer fractions, whereas results obtained with native water as the settling medium more nearly simulate the particle size existing in the stream.

For most daily stations, water temperatures were obtained at the time the samples for chemical quality were collected. Where practicable, the water temperatures at a station were determined at about the same time each day in order to minimize diurnal variation of temperature. The thermometer used for temperature determinations was accurate to plus or minus 0.5°F.

The description of the station includes a statement giving the periods for which there are published records of water quality. Extremes for constituents, suspended sediment, and temperature are not given for regular stations owing to the short period of continuous records.

#### ACCURACY OF FIELD DATA AND COMPUTED RESULTS

The accuracy of streamflow data depends primarily on (1) the stability of the stage-discharge relation or, if the control is unstable, the frequency of discharge measurements, and (2) the accuracy of observations of stage, measurements of discharge, and interpretation of records.

The station description states the degree of accuracy of the discharge records. "Excellent" indicates that, in general, the error in the daily records is believed to be less than 5 percent; "good," less than 10 percent; "fair," less than 15 percent; and "poor," probably more than 15 percent. The records of monthly and yearly mean discharge and runoff are, in general, more nearly accurate than the daily records.

Figures of cubic feet per second per square mile and runoff in inches are published only for stations in southeastern Alaska; they are not published for stations in the rest of the Territory, because the annual precipitation is generally less than 20 inches. Runoff varies widely in Alaska due to great differences in precipitation not only between sections of the Territory, but also at different elevations in the same areas. Generally speaking, annual precipitation is much greater in southeastern Alaska and along the coast to Seward than in the rest of the Territory. Even in southeastern Alaska annual precipitation may range from about 25 inches in the vicinity of Skagway in the northern part to about 150 inches near Ketchikan in the southern part, and may be as high as 180 inches at the southern tip of Baranof Island, all measured at or near sea level. However, precipitation increases with altitude, reaching a maximum at about 4,000 feet elevation. Consequently, runoff in inches as measured at low elevations on streams draining mountainous areas often totals nearly twice the precipitation measured at or near sea level in the same drainage basin. At nearly every gaging station in southeastern Alaska the measured

annual runoff in inches exceeds the annual precipitation as measured at the nearest Weather Bureau station.

#### PUBLICATIONS

A compilation of records of streamflow in Alaska through September 1950 has been published as WSP 1372. Records prior to 1946 were published in Geological Survey bulletins or water-supply papers or in reports of other agencies. Summary tables in WSP 1372 indicate the reports in which this data was originally published. In some cases the earlier reports contain more detailed information than is published in WSP 1372. That report contains a summary of monthly and annual discharges through September 1946 for all previously published records as well as records of daily and monthly discharge for the years 1946-50, which had not been published previously. All records prior to 1946 were re-examined and revised where warranted. Estimates of discharge were made to fill short gaps whenever practical.

Daily discharge records for water years 1951-53 have been published in WSP 1466.

Daily discharge records for water years 1954-56 have been published in WSP 1486.

The reports referred to above contain, in addition to records of daily discharge at gaging stations, the results of discharge measurements at many points other than regular gaging stations.

Geological Survey reports containing data on quality of surface waters in Alaska prior to 1948 include the following:

Professional Paper 135, Composition of river and lake waters of the United States, 1924.

Bulletin 770, The data of geochemistry, 1924.

Water-Supply Paper 372, A water-power reconnaissance in south-central Alaska, 1915.

Water-Supply Paper 418, Mineral springs of Alaska, 1917.

Records of chemical quality and water temperature obtained from 1948 to September 1950 are presented in WSP 1372.

Records of chemical quality, water temperature, and suspended sediment for water years 1951-53 have been published in WSP 1466.

Records of chemical quality, water temperature, and suspended sediment for water years 1954-56 have been published in WSP 1486.

## GAGING-STATION RECORDS

9

## SOUTHEASTERN ALASKA

## Winstanley Creek near Ketchikan

Location.--Lat 55°25', long 130°52', on right bank 0.3 mile downstream from Lower Winstanley Lake, 1.1 miles upstream from mouth, and 31 miles east of Ketchikan.

Drainage area.--13 sq mi, approximately.

Records available.--August 1936 to September 1938, August 1947 to September 1957. Monthly discharge only for some periods, published in WSP 1372.

Gage.--Water-stage recorder. Altitude of gage is 290 ft (by barometer).

Average discharge.--12 years, 152 cfs (110,000 acre-ft per year).

Extremes.--Maximum discharge during year, 814 cfs Dec. 25 (gage height, 3.46 ft); minimum, 10 cfs Feb. 7, 8 (gage height, 0.72 ft).

1936-38, 1947-57: Maximum discharge, 1,900 cfs Feb. 7 or 8, 1954 (gage height, 5.1 ft); minimum, 6.0 cfs Jan. 12, 1956 (gage height, 0.58 ft).

Flood sometime during period October 1938 to July 1947 reached a stage of 4.85 ft, from high-water mark in gage well (discharge, about 1,800 cfs).

Remarks.--Records good. Upper and Lower Winstanley Lakes above gage have areas of 465 and 175 acres, respectively.

## Discharge, in cubic feet per second, water year October 1956 to September 1957

## Harding River near Wrangell

Location.--Lat 56°13', long 131°38', on right bank 1 mile upstream from mouth on north shore of Bradfield Canal, 4 miles downstream from Fall Lake, and 34 miles southeast of Wrangell.

Drainage area.--95 sq mi, approximately.

Records available.--August 1951 to September 1957.

Gage.--Water-stage recorder. Altitude of gage is 20 ft (by barometer).

Average discharge.--6 years, 700 cfs (506,800 acre-ft per year).

Extremes.--Maximum discharge during year, 8,090 cfs Sept. 30 (gage height, 12.65 ft); minimum not determined.

1951-57: Maximum discharge, 9,820 cfs Oct. 2, 1952 (gage height, 13.84 ft), from rating curve extended above 4,500 cfs; minimum not determined.

Remarks.--Records good except those for periods of ice effect or no gage-height record, which are poor. Fall Lake, at elevation 182 ft, has an area of 170 acres.

Water year 1956-57: Max 4,990 Min - Mean 678 Cfsm 7.14 In. 96.87 Ac-ft 490,800

Peak discharge (base, 3,500 cfs).--Oct. 6 (6:30 a.m.) 4,200 cfs (9.75 ft); Sept. 30 (8:30 p.m.) 8,090 cfs (12.65 ft).

\* Discharge measurement made on this day.

Note.--Stage-discharge relation affected by ice Dec. 4-26, Jan. 8 to Feb. 23. No gage-height record Feb. 24 to Apr. 21 (stage-discharge relation affected by ice during most of period); discharge estimated on basis of 1 discharge measurement, weather records, and records for stations on nearby streams.

## Cascade Creek near Petersburg

Location.--Lat 57°01', long 132°47', on right bank 0.25 mile upstream from mouth on east shore of south arm of Thomas Bay, 2½ miles downstream from Swan Lake, and 15 miles northeast of Petersburg.

Drainage area.--23.0 sq mi.

Records available.--October 1917 to November 1928, October 1946 to September 1957. Monthly discharge only for some periods, published in WSP 1372. Prior to October 1920, published as "at Thomas Bay, near Petersburg."

Gage.--Water-stage recorder. Altitude of gage is 120 ft (by barometer). Prior to October 1946, at different datum.

Average discharge.--22 years, 244 cfs (176,600 acre-ft per year).

Extremes.--Maximum discharge during year, 2,350 cfs Sept. 30 (gage height, 8.58 ft), from rating curve extended above 1,000 cfs; minimum, 30 cfs Mar. 28, caused by temporary storage behind ice jam upstream.

1917-28, 1946-57: Maximum discharge, 3,280 cfs Sept. 11, 1947 (gage height, 10.0 ft, from floodmarks), from rating curve extended above 1,000 cfs; minimum, 11 cfs Mar. 27, 1948, Mar. 27, 1954, and Mar. 20, 21, 1956, caused by temporary storage behind ice jam upstream; minimum gage height, 0.68 ft Mar. 27, 1948.

Remarks.--Records good except those for periods of no gage-height record, which are fair. Swan Lake, at elevation about 1,500 ft, has an area of 614 acres and a drainage area of 18.9 sq mi.

Revisions.--WSP 1372: Drainage area.

Peak discharge (base, 1,100 cfs).--Sept. 30 (5:30 a.m.) 2,350 cfs (8.58 ft).

\* Discharge measurement made on this day.  
a No gage-height record; discharge estimated on basis of recorded range in stage, weather records, and records for stations on nearby streams.

## Long River near Juneau

Location.--Lat 58°10'00", long 133°41'50", on right bank three-eighths of a mile upstream from Indian Lake, 1 mile downstream from Long Lake, and 27 miles southeast of Juneau.

Drainage area.--32.5 sq mi.

Records available.--October 1915 to September 1924, October to December 1926, June 1927 to May 1933, October 1951 to September 1957. Monthly discharge only for some periods, published in WSP 1372. Prior to January 1921, published as "below Second Lake, at Port Snettisham."

Gage.--Water-stage recorder. Altitude of gage is 183 ft (from topographic map). Prior to Oct. 1, 1929, at site 600 ft upstream at different datum.

Average discharge.--20 years (1915-24, 1927-32, 1951-57), 455 cfs (329,400 acre-ft per year).

Extremes.--Maximum discharge during year, 5,310 cfs Sept. 30 (gage height, 10.56 ft), from rating curve extended above 2,100 cfs by logarithmic plotting; minimum observed, 28 cfs Mar. 28 (discharge measurement).

1915-24, 1927-32, 1951-57: Maximum discharge, 6,000 cfs Sept. 10, 1927 (gage height, 10.2 ft, site and datum then in use), from rating curve extended above 1,700 cfs by logarithmic plotting; minimum recorded, 22 cfs Mar. 22, 1933.

Remarks.--Records good except those for periods of ice effect or no gage-height record, which are poor.

Revisions.--WSP 1372: Drainage area.

Water year 1956-57: Max 4,510 Min - Mean 450 Cfsm 13.8 In. 187.99 Ac-ft 325,900

Peak discharge (base, 2,000 cfs).--Sept. 10 (7 p.m.) 2,080 cfs (6.45 ft); Sept. 30 (9 a.m.) 5,310 cfs (10.56 ft).

\* Discharge measurement made on this day.

Note.--Stage-discharge relation affected by ice Dec. 9-11, Jan. 6-11. No gage-height record Dec. 12-24, Jan. 12 to Apr. 3 (stage-discharge relation affected by ice during most of period); discharge estimated on basis of 1' discharge measurement, weather records, and records for Dorothy Creek near Juneau.

## Dorothy Creek near Juneau

Location.--Lat 58°13'40", long 134°02'25", on left bank 0.7 mile downstream from Lake Bart, 0.8 mile upstream from mouth, 3 miles downstream from Lake Dorothy, and 14 miles south-east of Juneau.

Drainage area.--15.2 sq mi.

Records available.--October 1929 to October 1941, September 1942 to December 1943, June 1944 to September 1957. Monthly discharge only for some periods, published in WSP 1372.

Gage.--Water-stage recorder. Altitude of gage is 350 ft (from topographic map). Prior to Sept. 14, 1937, at site 100 ft upstream from mouth at different datum.

Average discharge.--26 years (1929-41, 1942-43, 1944-57), 143 cfs (103,500 acre-ft per year).

Extremes.--Maximum discharge during year, 898 cfs Sept. 30 (gage height, 4.58 ft); minimum observed, 12 cfs Mar. 27 (discharge measurement).

1929-41, 1942-57: Maximum discharge, 1,780 cfs Nov. 3, 1949 (gage height, 5.85 ft), from rating curve extended above 560 cfs; minimum recorded, 6 cfs Mar. 23, 25, 28, 1933.

Remarks.--Records good except those for periods of ice effect or no gage-height record, which are fair. Dorothy Lake (area, 952 acres) lies at an altitude of 2,423 ft, less than 4 miles from mouth of Dorothy Creek; Lieuy Lake (area, 80 acres) lies at an altitude of 1,711 ft; and Bart Lake (area, 250 acres) lies at an altitude of 986 ft.

Revisions.--WSP 1372: Drainage area.

\* Discharge measurement made on this day.

b Stage-discharge relation affected by ice.

Note.--No gage-height record Nov. 10-26, Nov. 29 to Jan. 2; discharge estimated on basis of recorded range in stage, weather records, and records for Gold Creek at Juneau.

## Carlson Creek near Juneau

Location.--Lat  $58^{\circ}19'00''$ , long  $134^{\circ}10'15''$ , on left bank between two unnamed tributaries,  $1\frac{1}{2}$  miles upstream from mouth,  $1\frac{1}{4}$  miles downstream from Sheep Fork, and  $8\frac{3}{4}$  miles east of Juneau.

Drainage area.--24.3 sq mi.

Records available.--July 1951 to September 1957.

Gage.--Water-stage recorder. Altitude of gage is 130 ft (from topographic map).

Average discharge.--6 years, 320 cfs (231,700 acre-ft per year).

Extremes.--Maximum discharge during year, 4,500 cfs Sept. 30 (gage height, 9.55 ft), from rating curve extended above 2,000 cfs; minimum not determined.

1951-57: Maximum discharge, that of Sept. 30, 1957; minimum not determined.

Remarks.--Records good except those for periods of no gage-height record, which are poor.

Discharge, in cubic feet per second, water year October 1956 to September 1957

\* Discharge measurement made on this day.

Note.--No gage-height record Dec. 2-25, Jan. 7 to Apr. 15 (stage-discharge relation affected by ice during most of period); discharge estimated on basis of 3 discharge measurements, weather records, and records for Gold Creek at Juneau.

## Sheep Creek near Juneau

Location.--Lat 58°16'30", long 134°18'50", on right bank 0.3 mile upstream from diversion dam of Alaska-Juneau Gold Mining Co.'s Sheep Creek powerplant, 1 mile northeast of Thane, 1 $\frac{1}{2}$  miles upstream from mouth, and 4 miles southeast of Juneau.

Drainage area.--4.30 sq mi.

Records available.--January 1911 to December 1913, August 1916 to December 1920, October 1946 to September 1957. Monthly discharge only for some periods, published in WSP 1372. Prior to 1946, published as "near Thane."

Gage.--Water-stage recorder and wooden control. Datum of gage is 643.5 ft above mean sea level (levels by Conservation Division, U. S. Geological Survey). Prior to August 1916, staff gage at same site and datum.

Average discharge.--17 years, 46.3 cfs (33,520 acre-ft per year).

Extremes.--Maximum discharge during year, 466 cfs Sept. 30 (gage height, 2.52 ft); no flow Mar. 21-31.

Mar. 1911-13, 1916-20, 1946-57: Maximum discharge, 840 cfs Sept. 8, 1948 (gage height, 3.60 ft); no flow at times at gage site but probably some flow at all times at diversion dam 0.3 mile downstream (records for period 1916-20 based on measurements at diversion dam).

Remarks.--Records good except those for periods of no gage-height record, which are poor.

Revisions.--WSP 1372: Drainage area.

Peak discharge (base, 460 cfs).--Sept. 30 (4:30 a.m.) 466 cfs (2.52 ft).

\* Discharge measurement made on this day.

Note.--No gage-height record Dec. 2-24, Jan. 7 to Apr. 22; discharge estimated on basis of 2 discharge measurements, weather records, and records for Gold Creek at Juneau.

## Gold Creek at Juneau

Location.--Lat  $58^{\circ}18'25''$ , long  $134^{\circ}24'05''$ , on left bank 10 ft downstream from highway bridge, 150 ft upstream from Alaska Electric Light and Power Co. dam and diversion, half a mile northeast of Juneau, and 1 mile upstream from mouth.

Drainage area.--9.76 sq mi.

Records available.--July 1916 to December 1920, October 1946 to September 1948, October 1949 to September 1957.

Gage.--Water-stage recorder. Altitude of gage is 245 ft (from topographic map). July 20, 1916, to Dec. 31, 1920, water-stage recorder at site 50 ft upstream at different datum. Sept. 11, 1946, to Sept. 30, 1948, staff gage at site 0.7 mile downstream at different datum.

Average discharge.--14 years (1916-20, 1946-48, 1949-57), 104 cfs (75,290 acre-ft per year).

Extremes.--Maximum discharge during year, 1,320 cfs Sept. 30 (gage height, 5.83 ft); minimum daily, 2.3 cfs Mar. 28, 29.

1916-20, 1946-48, 1949-57: Maximum discharge, 2,600 cfs Sept. 26, 1918 (gage height, 6.8 ft, site and datum then in use), from rating curve extended above 520 cfs; no flow at times during 1951 and 1956.

Remarks.--Records good except those for periods of ice effect or no gage-height record, which are fair. One small diversion above station for domestic water supply.

Revisions.--WSP 1372: Drainage area.

Peak discharge (base, 800 cfs).--Nov. 21 (2:15 p.m.) 886 cfs (4.21 ft); Nov. 25 (8 p.m.) 806 cfs (4.43 ft); Dec. 28 (10 a.m.) 875 cfs (4.93 ft); Sept. 10 (12:30 p.m.) 750 cfs (4.48 ft); Sept. 30 (3 a.m.) 1,320 cfs (5.83 ft).

<sup>a</sup> Discharge measurement made on this day.

b Stage-discharge relation affected by ice.

Note.--No gage-height record Dec. 3-24, Jan. 8 to Mar. 25 (stage-discharge relation affected by ice during most of period); discharge estimated on basis of 11 discharge measurements, weather records, and records for stations on nearby streams.

## Lemon Creek near Juneau

Location--Lat  $58^{\circ}23'30''$ , long  $134^{\circ}25'15''$ , on left bank a quarter of a mile upstream from Canyon Creek,  $4\frac{1}{2}$  miles upstream from mouth, and 6 miles north of Juneau.

Drainage area--12.1 sq mi.

Records available--August 1951 to November 1953, July 1954 to September 1957.

Gage--Water-stage recorder. Altitude of gage is 650 ft (from topographic map).

Average discharge--5 years, 147 cfs (106,400 acre-ft per year).

Extremes--Maximum discharge during year, 1,970 cfs Sept. 30 (gage height, 3.97 ft), from rating curve extended above 650 cfs by logarithmic plotting; minimum not determined.

1951-57: Maximum discharge, 2,080 cfs Sept. 14, 1952 (gage height, 4.08 ft), from rating curve extended above 650 cfs by logarithmic plotting; minimum not determined.

Remarks--Records good except those for periods of no gage-height record, which are poor.

Note.--No gage-height record Oct. 22 to Nov. 7, Nov. 13-19, Dec. 2-27, Dec. 30 to May 7 (stage-discharge relation affected by ice during most of period); discharge estimated on basis of 1 discharge measurement, weather records, and records for Gold Creek at Juneau.

## Perseverance Creek near Wacker

Location.--Lat 55°24'40", long 131°40'05", on Revillagigedo Island, on right bank 500 ft downstream from Perseverance Lake, half a mile upstream from Connell Lake, 2 miles east of Wacker, and 4 miles north of Ketchikan.

Drainage area.--2.81 sq mi.

Records available.--October 1931 to September 1938, November 1938, June to September 1939, October 1946 to September 1957. Monthly discharge only for some periods, published in WSP 1372.

Gage.--Water-stage recorder and wooden control. Altitude of gage is 600 ft (from topographic map). Prior to October 1946, at site 100 ft upstream at different datum.

Average discharge.--18 years (1931-38, 1946-57), 36.5 cfs (26,420 acre-ft per year).

Extremes.--Maximum discharge during year, 387 cfs Dec. 24 (gage height, 4.38 ft), from rating curve extended above 150 cfs; minimum daily, 0.4 cfs Sept. 26. 1931-39, 1946-57; Maximum discharge, 543 cfs Oct. 30, 1949 (gage height, 5.26 ft), from rating curve extended above 150 cfs; minimum daily, that of Sept. 26, 1957.

Remarks.--Records good except those for periods of ice effect or no gage-height record, which are poor.

Revisions.--WSP 1372: Drainage area.

Note.--No gage-height record Oct. 1-5, Jan. 9 to Mar. 12, Mar. 26-30 (stage-discharge relation affected by ice during part of period); discharge estimated on basis of 1 discharge measurement, recorded range in stage, weather records, and records for stations on nearby streams. Stage-discharge relation affected by ice Mar. 15-19.

## Ward Creek near Wacker

Location.--Lat 55°25'50", long 131°40'00", on Revillagigedo Island, on right bank three-quarters of a mile downstream from Connell Lake Dam, 2½ miles northeast of Wacker, and 5½ miles north of Ketchikan.

Drainage area.--14.0 sq mi.

Records available.--October 1948 to September 1957.

Gage.--Water-stage recorder. Altitude of gage is 150 ft (from topographic map). Prior to June 20, 1952, water-stage recorder at several sites three-quarters of a mile upstream at various datums. June 20 to Dec. 11, 1952, staff gage at present site and datum.

Extremes.--Maximum discharge during year, 971 cfs Dec. 25 (gage height, 6.97 ft), from rating curve extended above 230 cfs; minimum, 0.6 cfs June 16, 17, 18.  
1948-57: Maximum discharge, 2,600 cfs Apr. 16, 1952 (gage height, 6.83 ft, site and datum then in use); minimum daily, 0.5 cfs Aug. 28 to Sept. 5, 1954.

Remarks.--Records good except those for periods of ice effect, and those above 350 cfs, which are poor. Flow regulated by Lake Connell starting in October 1953 (capacity, 11,510 acre-ft). Water diverted above station from Lake Connell by 60-inch pipeline for use by Ketchikan Pulp Co. at Ward Cove.

Discharge, in cubic feet per second, water year October 1956 to September 1957

## Mahoney Creek near Ketchikan

Location.--Lat 55°25'30", long 131°30'45", on Revillagigedo Island, on right bank an eighth of a mile upstream from mouth, an eighth of a mile downstream from Mahoney Lake, and 8 miles northeast of Ketchikan.

Drainage area.--5.70 sq mi.

Records available.--September 1920 to October 1925, September 1926 to October 1933, October 1947 to September 1957. Monthly discharge only for some periods, published in WSP 1372. Prior to January 1921 published as "at George Inlet."

Gage.--Water-stage recorder. Altitude of gage is 45 ft (by barometer). Prior to October 1947, at different datum.

Average discharge.--22 years, 107 cfs (77,460 acre-ft per year).

Extremes.--Maximum discharge during year, 838 cfs Dec. 25 (gage height, 3.35 ft), minimum, 8.6 cfs Feb. 1-10 (gage height, 0.55 ft).

1920-25, 1926-33, 1947-57: Maximum discharge, 2,530 cfs Feb. 2, 1954 (gage height, 4.66 ft), from rating curve extended above 1,100 cfs; minimum daily, 1.5 cfs Jan. 30 to Feb. 1, 1950.

Remarks.--Records good except those for periods of ice effect or no gage-height record, which are fair. Mahoney Lake at elevation 76 ft has an area of 163 acres.

Revisions.--WSP 1372: Drainage area.

Note.--No gage-height record Dec. 5-15, Mar. 14 to May 8; discharge estimated on basis of recorded range in stage, weather records, and records for stations on nearby streams.

## Fallis Creek near Ketchikan

Location.--Lat 55°36'50", long 131°20'55", on Revillagigedo Island, on left bank 1,100 ft upstream from mouth on east shore of Carroll Inlet, 1.1 miles downstream from Swan Lake, and 22 miles northeast of Ketchikan.

Drainage area.--36.5 sq mi.

Records available.--August 1916 to January 1926, September 1927 to December 1933, October 1946 to September 1957. Monthly discharge only for some periods, published in WSP 1372. Prior to January 1921, published as Swan Lake Outlet at Carroll Inlet.

Gage.--Water-stage recorder. Altitude of gage is 130 ft (from topographic map). August 1916 to January 1926 and September 1927 to November 1933, at site about 1,000 ft upstream at different datum.

Average discharge.--26 years (1916-25, 1927-33, 1946-57), 460 cfs (333,000 acre-ft per year).

Extremes.--Maximum discharge during year, 1,750 cfs Nov. 21 (gage height, 4.69 ft); minimum, 49 cfs Feb. 9 (gage height, 2.00 ft). 1916-26, 1927-33, 1946-57: Maximum discharge, about 5,500 cfs Nov. 1, 1917; minimum daily, 19 cfs Feb. 21-25, 1925.

Remarks.--Records good. Swan Lake has an area of 1,050 acres.

Revisions (water years).--WSP 1372: 1918, drainage area.

## Fish Creek near Ketchikan

Location.--Lat 55°23'30", long 131°11'40", on Revillagigedo Island, on right bank 50 ft upstream from outlet of Low Lake, 600 ft upstream from mouth at head of Thorne Arm, and 18 miles east of Ketchikan.

Drainage area.--32.1 sq mi, excludes that of Granite Lake drainage basin.

Records available.--May 1915 to October 1935, October 1938 to September 1957. Monthly discharge only for some periods, published in WSP 1372. Prior to January 1921, published as "near sea level, Revillagigedo Island."

Gage.--Water-stage recorder. Altitude of gage is 20 ft (by barometer). May 1915 to November 1935 at same site at different datum.

Average discharge.--39 years, 416 cfs (301,200 acre-ft per year).

Extremes.--Maximum discharge during year, 1,960 cfs Dec. 26 (gage height, 3.18 ft); minimum, 29 cfs Feb. 7 (gage height, 0.49 ft).

1915-35, 1938-57: Maximum discharge, 4,600 cfs Nov. 1, 1917 (gage height, 5.33 ft, datum then in use), from rating curve extended above 1,400 cfs; minimum daily, 20 cfs Sept. 9, 10, 1928.

Remarks.--Records good. Lakes in the basin are as follows: Basin Lake (240 acres), Mirror Lake (1,350 acres), Third Lake (180 acres), Big Lake (358 acres), and Low Lake (55 acres).

Revisions (water years).--WSP 1372: 1918.

## Ella Creek near Ketchikan

Location.--Lat 55°30'20", long 131°01'25", on Revillagigedo Island, on left bank 1 mile downstream from Lower Ella Lake, 1.5 miles upstream from mouth at Ella Bay, and 28 miles northeast of Ketchikan.

Drainage area.--19.7 sq mi.

Records available.--October 1927 to September 1938, August 1947 to September 1957. Monthly discharge only for some periods, published in WSP 1372.

Gage.--Water-stage recorder. Altitude of gage is 150 ft (by barometer). Prior to August 1947, at different datum.

Average discharge.--21 years, 245 cfs (177,400 acre-ft per year).

Extremes.--Maximum discharge during year, 1,000 cfs Dec. 25 (gage height, 4.33 ft); minimum, 22 cfs Feb. 6, 7 (gage height, 1.26 ft). 1927-38, 1947-57: Maximum discharge recorded, 1,720 cfs Dec. 7, 1930 (gage height, 5.60 ft, datum then in use); minimum daily, 12 cfs Sept. 7-12, 1930, Jan. 30 to Feb. 2, 1950.

Remarks.--Records good. Ella Lake, 1 mile above station, has an area of 1,930 acres.

Revisions.--WSP 1372: Drainage area.

Discharge, in cubic feet per second, water year October 1956 to September 1957

## Manzanita Creek near Ketchikan

Location.--Lat 55°36', long 130°59', on Revillagigedo Island, on right bank a quarter of a mile upstream from mouth at Manzanita Bay, East Behm Canal, 2 miles downstream from Manzanita Lake, and 31 miles northeast of Ketchikan.

Drainage area.--33.9 sq mi.

Records available.--October 1927 to September 1937, August 1947 to September 1957.  
Monthly discharge only for some periods, published in WSP 1372.

Gage.--Water-stage recorder. Altitude of gage is 140 ft (by barometer).

Average discharge.--20 years, 462 cfs (334,500 acre-ft per year).

Extremes.--Maximum discharge during year, 2,890 cfs Sept. 6 (gage height, 7.26 ft); minimum, 105 cfs Mar. 7 (gage height, 1.55 ft).

1927-37, 1947-57: Maximum discharge, 3,870 cfs Oct. 13, 1949 (gage height, 8.19 ft), from rating curve extended above 1,600 cfs by logarithmic plotting; minimum not determined.

A discharge of 4,480 cfs occurred sometime during the period 1938-47 (gage height, 8.7 ft, from floodmark in well).

Remarks.--Records good. There are two lakes above gage, Manzanita Lake (1,610 acres) and January Lake on North Fork Manzanita Creek.

Revisions.--WSP 1372: Drainage area.

## Sawmill Creek near Sitka

Location.--Lat 57°03'05", long 135°13'40", on Baranof Island, on left bank 100 ft downstream from Sitka Public Utilities abandoned hydroelectric plant, 500 ft upstream from mouth, 1½ miles downstream from Blue Lake, and 4 miles east of Sitka.

Drainage area.--39.0 sq mi.

Records available.--September 1920 to December 1922, February 1928 to September 1942, October 1945 to September 1957. Monthly discharge only for some periods, published in WSP 1372.

Gage.--Water-stage recorder. Altitude of gage is about 4 ft above mean sea level. Prior to Apr. 12, 1947, staff gages or water-stage recorders at several sites within 1,500 ft of present site at various datums.

Average discharge.--28 years, 485 cfs (351,100 acre-ft per year).

Extremes.--Maximum discharge during year, 4,630 cfs Sept. 30 (gage height, 8.17 ft); minimum, 48 cfs Mar. 10-17 (gage height, 1.11 ft).

1920-22, 1928-42, 1945-57: Maximum discharge, 7,100 cfs Sept. 8, 1948 (gage height, 10.20 ft), from rating curve extended above 2,600 cfs by logarithmic plotting; minimum, 9.1 cfs Mar. 4, 1951 (gage height, 0.47 ft).

Remarks.--Records good except those for periods of no gage-height record, which are fair. Blue Lake, 1.6 miles upstream, has an area of 495 acres.

Cooperation.--Water-stage recorder inspected by employees of Sitka Public Utilities.

Revisions (water years).--WSP 1372: 1929(M).

Note.--No gage-height record Jan. 8 to Feb. 14, Feb. 22-27; discharge estimated on basis of 1 discharge measurement, weather records, and records for stations on nearby streams.

## Deer Lake Outlet near Port Alexander

Location.--Lat 56°31', long 134°40', on Baranof Island, on right bank at tidewater at Mist Cove, an eighth of a mile downstream from Deer Lake and 19 miles north of Port Alexander.

Drainage area.--9.2 sq mi, approximately.

Records available.--June 1951 to September 1957.

Gage.--Water-stage recorder. Altitude of gage is about 1 ft above mean sea level.

Average discharge.--6 years, 159 cfs (115,100 acre-ft per year).

Extremes.--Maximum discharge during year, 463 cfs Dec. 1 (gage height, 3.16 ft); minimum daily, 30 cfs Feb. 5-8.

1951-57: Maximum discharge, 642 cfs Oct. 22, 1953 (gage height, 3.47 ft); minimum, 9.4 cfs Mar. 23, 1956 (gage height, 0.73 ft), caused by temporary storage behind ice jam upstream.

Remarks.--Records fair. There are two lakes above gage, Deer Lake (968 acres), and Deer Upper Lake (139 acres).

Discharge, in cubic feet per second, water year October 1956 to September 1957

## Takatz Creek near Baranof

Location.--Lat 57°08'35", long 134°51'50", on Baranof Island, on left bank at tidewater at Takatz Bay, 2 miles downstream from Takatz Lake, and 4 miles north of Baranof.

Drainage area.--17.5 sq mi.

Records available.--July 1951 to September 1957.

Gage.--Water-stage recorder. Altitude of gage is about 4 ft above mean sea level.

Average discharge.--6 years, 261 cfs (189,000 acre-ft per year).

Extremes.--Maximum discharge during year, 3,990 cfs Sept. 30 (gage height, 5.52 ft), from rating curve extended above 660 cfs by logarithmic plotting; minimum, 24 cfs Feb. 7, 8 (gage height, 1.51 ft).

1951-57: Maximum discharge, 4,820 cfs Sept. 14, 1952 (gage height, 5.79 ft), from rating curve extended above 660 cfs by logarithmic plotting; minimum not determined.

Remarks.--Records good. Takatz Lake has an area of 425 acres.

Discharge, in cubic feet per second, water year October 1956 to September 1957

## Hasselborg Creek near Angoon

Location.--Lat 57°39'40" long 134°14'55", on Admiralty Island, on right bank at outlet of Hasselborg Lake, 16 miles northeast of Angoon.

Drainage area.--56.2 sq mi.

Records available.--June 1951 to September 1957.

Gage.--Water-stage recorder. Altitude of gage is 295 ft (from topographic map).

Average discharge.--6 years, 311 cfs (225,200 acre-ft per year).

Extremes.--Maximum discharge during year, 1,610 cfs Dec. 28 (gage height, 3.24 ft), from rating curve extended above 780 cfs; minimum not determined.

1951-57: Maximum discharge, 2,400 cfs Oct. 23, 1953 (gage height, 3.78 ft), from rating curve extended above 780 cfs; minimum not determined.

Remarks.--Records good except those for period of no gage-height record, which are poor. Hasselborg Lake has an area of 3,500 acres.

Discharge, in cubic feet per second, water year October 1956 to September 1957

## Gakona River at Gakona

Location.--Lat 62°18'05", long 145°18'20", near center of span on downstream side of bridge on Glenn Highway at Gakona, 500 ft upstream from mouth and 1.9 miles northeast of junction of Richardson and Glenn Highways.

Drainage area.--620 sq mi, approximately.

Records available.--Discharge: August to September 1948, October 1949 to September 1957.

Chemical analyses: February 1952 to September 1954.

Water temperatures: October 1952 to September 1954.

Sediment records: 1953-57 (periodic).

Gage.--Wire-weight gage read once daily. Datum of gage is 1,403.03 ft above mean sea level. Aug. 8 to Sept. 13, 1948, staff gage at same site and datum.

Average discharge.--8 years, 947 cfs (685,600 acre-ft per year).

Extremes.--Maximum discharge during year, 5,800 cfs May 20 (gage height, 6.50 ft, from graph based on gage readings); minimum not determined.

1948, 1949-57: Maximum discharge, 10,300 Aug. 1, 1956 (gage height, 7.92 ft, from graph based on gage readings), from rating curve extended above 5,700 cfs by logarithmic plotting; no flow for part of Mar. 25, 1953, caused by temporary storage behind ice jam upstream.

Remarks.--Records fair except those for periods of ice effect or no gage-height record, which are poor. Some diurnal fluctuation caused by glacier melt at the source. Records of specific conductance of daily samples available in district office. Quality of Water Branch, at Palmer, Alaska.

Discharge, in cubic feet per second, water year October 1956 to September 1957

## Tazlina River near Glennallen

Location.--Lat 62°03'20", long 145°25'35", in W $\frac{1}{2}$  sec. 9, T. 3 N., R. 1 W., near left bank on downstream side of bridge on Richardson Highway, 2 miles upstream from mouth, 4 miles downstream from Moose Creek, and 5 miles southeast of Glennallen.

Drainage area.--2,670 sq mi, approximately.

Records available.--Discharge: August 1949 to September 1950, October 1951 to September 1957. Discharge measurements only in 1951.

Chemical analyses: February 1952 to August 1953, January to September 1954, May to August 1956.

Sediment records: 1953-57 (periodic).

Gage.--Wire-weight gage read twice daily. Datum of gage is 1,109.13 ft above mean sea level, adjustment of 1952.

Average discharge.--7 years, 4,301 cfs (3,114,000 acre-ft per year).

Extremes.--Maximum discharge during year, 37,300 cfs Sept. 8 (gage height, 11.24 ft, from graph based on gage readings); minimum not determined.

1949-50, 1951-57: Maximum discharge, 47,000 cfs Aug. 31, 1955 (gage height, 12.25 ft, from graph based on gage readings); minimum not determined.

Remarks.--Records good except those for periods of ice effect or no gage-height record, which are poor.

Discharge, in cubic feet per second, water year October 1956 to September 1957

## Klutina River at Copper Center

Location.--Lat 61°57'10", long 145°18'20", in SW<sub>1</sub> sec. 18, T. 2 N., R. 1 E., near center of span on downstream side of bridge on Richardson Highway, 0.7 mile south of Copper Center, three-quarters of a mile upstream from mouth, and 24 miles downstream from Klutina Lake.

Drainage area.--880 sq mi, approximately.

Records available.--Discharge: May to August 1908 (gage heights only), June to October 1913, August 1949 to September 1957.

Chemical analyses: March 1952 to September 1954, May to August 1956.

Water temperatures: October 1952 to September 1953.

Sediment records: 1953-54, 1956-57 (periodic).

Gage.--Wire-weight gage read once daily. Datum of gage is 1,011.26 ft above mean sea level. May 19 to Aug. 31, 1908, and June 17 to Oct. 31, 1913, staff gages at sites a quarter of a mile downstream at different datums.

Average discharge.--8 years (1949-57), 1,719 cfs (1,245,000 acre-ft per year).

Extremes.--Maximum discharge observed during year, 8,250 cfs June 18 (gage height, 8.10 ft); maximum gage height observed, 9.31 ft Dec. 12 (backwater from ice); minimum discharge not determined.

1913-57: Maximum discharge observed, 9,040 cfs June 29, 1953 (gage height, 9.24 ft); maximum gage height observed, 15.55 ft May 9, 1953 (backwater from ice); minimum discharge not determined.

Remarks.--Records fair except those for periods of ice effect, which are poor.

Revisions.--WSP 1372: Drainage area.

Discharge, in cubic feet per second, water year October 1956 to September 1957

## Tonsina River at Tonsina

Location--Lat 61°39'50", long 145°10'50", near center of span on downstream side of bridge on Richardson Highway at Tonsina, 0.5 mile upstream from Bernard Creek and 0.7 mile upstream from Squirrel Creek.

Drainage area--420 sq mi, approximately.

Records available--Discharge: May 1950 to December 1954, January to September 1955 (fragmentary), October 1955 to September 1957.

Chemical analyses: February 1952 to September 1953, January to September 1954, May to August 1956.

Water temperatures: October 1952 to September 1953.

Sediment records: 1953-54, 1956-57 (periodic).

Gage--Wire-weight gage read once daily. Altitude of gage is 1,500 ft (from topographic map).

Average discharge--6 years (1950-54, 1955-57), 921 cfs (666,800 acre-ft per year).

Extremes--Maximum discharge during year, 7,910 cfs June 8 (gage height, 7.00 ft, from graph based on gage readings); minimum not determined.

1950-54, 1955-57: Maximum discharge that of June 8, 1957; minimum not determined.

Remarks--Records fair except those for periods of ice effect or no gage-height record, which are poor.

Discharge, in cubic feet per second, water year October 1956 to September 1957

## ALASKA WEST OF LONGITUDE 141°

## Copper River near Chitina

Location.--Lat 61°28', long 144°28', on right bank at head of Woods Canyon, half a mile downstream from Taral Creek and abandoned Indian village of Taral,  $\frac{2}{3}$  miles upstream from Tenas Creek, and 3 $\frac{1}{2}$  miles south of Chitina.

Drainage area.--20,600 sq mi, approximately.

Records available.--Discharge: July to September 1950, May to November 1952, October 1955 to September 1957.

Chemical analyses: June to November 1950, January 1954 to September 1957.

Water temperatures: June to September 1957.

Sediment records: 1954-56 (periodic), June to September 1957.

Gage.--Water-stage recorder. Altitude of gage is 400 ft (from topographic map). Prior to June 2, 1952, staff gage at site a quarter of a mile upstream at datum 1.4 ft higher. June 2 to Nov. 30, 1952, water-stage recorder at same site and datum.

Extremes.--Maximum discharge during year, 148,000 cfs Aug. 12 (gage height, 20.08 ft); minimum not determined.

1950, 1952, 1955-57: Maximum discharge recorded, 159,000 cfs July 30, 1952 (gage height, 22.56 ft); minimum not determined.

Maximum stage known since 1950, 28.3 ft in July 1951, at present datum, from flood-marks (discharge, 220,000 cfs). Minimum discharge observed, 3,830 cfs Feb. 25, 1954 (discharge measurement).

Remarks.--Records fair except those for periods of no gage-height record, which are poor. Some diurnal fluctuation caused by glacier melt at the source. Records of specific conductance of daily samples available in district office, Quality of Water Branch, Palmer, Alaska.

## ALASKA WEST OF LONGITUDE 141°

## Power Creek near Cordova

Location.--Lat 60°35'15", long 145°37'05", on left bank at old bridge site, 1 mile upstream from Eyak Lake and  $\frac{5}{2}$  miles northeast of Cordova.

Drainage area.--20.5 sq mi.

Records available.--July to November 1913 (fragmentary), August 1947 to September 1957.

Gage.--Water-stage recorder. Datum of gage is 33.5 ft above mean sea level (river profile survey). July to November 1913, staff gage half a mile upstream at different datum.

Average discharge.--10 years, 252 cfs (182,400 acre-ft per year).

Extremes.--Maximum discharge during year, 4,270 cfs Sept. 12 (gage height, 6.96 ft), from rating curve extended above 1,450 cfs by logarithmic plotting; minimum not determined. 1947-57: Maximum discharge recorded, 5,540 cfs Sept. 25, 1949 (gage height, 7.65 ft), from rating curve extended above 1,450 cfs by logarithmic plotting; minimum recorded, 13 cfs April 29, 1950 (gage height, 1.50 ft), but may have been less during periods of no gage-height record.

Remarks.--Records good except those for periods of ice effect or no gage-height record, which are poor.

Discharge, in cubic feet per second, water year October 1956 to September 1957

Peak discharge (base, 2,000 cfs).--Sept. 9 (4 p.m.) 3,070 cfs (6.14 ft); Sept. 12 (1 p.m.) 4,270 cfs (6.96 ft); Sept. 21 (6:30 p.m.) 2,150 cfs (5.42 ft); Sept. 24 (2:30 p.m.) 2,250 cfs (5.52 ft); Sept. 28 (7:30 p.m.) 3,340 (6.53 ft).

\* Discharge measurement made on this day.

Note.--No gage-height record Jan. 8 to Feb. 14 (stage-discharge relation affected by ice during part of period), July 31 to Aug. 11, Aug. 13-15, Sept. 15-19; discharge estimated on basis of 2 discharge measurements and weather records. Stage-discharge relation affected by ice Feb. 15-28.

## Anchor River at Anchor Point

Location.--Lat 59°46'10", long 151°50'00", in SE<sup>1</sup> sec. 4, T. 5 S., R. 15 W., near right bank on downstream side of Sterling Highway bridge at Anchor Point, 0.1 mile downstream from North Fork and 1 mile upstream from mouth.

Drainage area.--226 sq mi.

Records available.--Discharge: June 1953 to September 1957.

Chemical analyses: January 1953, May 1953 to September 1954.

Water temperatures: May 1953 to September 1954.

Sediment records: July 1953 to August 1954 (periodic).

Gage.--Wire-weight gage read once daily. Datum of gage is 24 ft above mean sea level (river-profile survey).

Extremes.--Maximum discharge during year, 1,620 cfs May 9 (gage height, 4.30 ft from graph based on gage readings), maximum gage height observed, 5.90 ft Dec. 7 (ice jam); minimum discharge, 45 cfs July 16.

1953-57: Maximum discharge, 2,320 cfs May 7, 1954 (gage height, 4.95 ft, from graph based on gage readings), from rating curve extended above 880 cfs by logarithmic plotting; maximum gage height, 6.38 ft Apr. 29, 1956, from graph based on gage readings (ice jam); minimum discharge observed, 28 cfs July 28, 1953 (gage height, 1.81 ft), but may have been less during periods of no gage-height record.

Remarks.--Records fair except those for periods of ice effect or no gage-height record, which are poor.

b Stage-discharge relation affected by ice.

Note.--No gage-height record Nov. 2 to Apr. 30 (stage-discharge relation affected by ice during most of period); discharge estimated on basis of 3 discharge measurements and weather records.

## ALASKA WEST OF LONGITUDE 141°

## Kasilof River near Kasilof

Location.--Lat 60°19'05", long 151°15'35", in SW<sub>1</sub> sec. 30, T. 3 N., R. 11 W., near center of span on downstream side of bridge on Sterling Highway, 0.9 mile upstream from Crooked Creek, 4 miles downstream from Moosehead Rapids, 5 miles south of Kasilof, and 10 miles downstream from Tustumena Lake.

Drainage area.--738 sq mi.

Records available.--Discharge: July 1949 to September 1957.

Chemical analyses: March to September 1952.

Sediment records: June 1953 to August 1954 (periodic).

Gage.--Wire-weight gage read once daily. Datum of gage is 23.37 ft above mean sea level (Corps of Engineers bench mark).

Average discharge.--8 years, 2,324 cfs (1,683,000 acre-ft per year).

Extremes.--Maximum discharge during year, 12,300 cfs Sept. 14 (gage height, 7.90 ft, from graph based on gage readings); minimum not determined.

1949-57: Maximum discharge, that of Sept. 14, 1957; maximum gage height observed, 8.62 ft Nov. 25, 1955 (backwater from ice); minimum discharge not determined.

Remarks.--Records good except those for periods of ice effect, which are poor.

\* Discharge measurement made on this day.

Note.--Stage-discharge relation affected by ice Nov. 7-26, Nov. 30 to Apr. 29 (no gage-height records Dec. 7 to Mar. 31 except once-weekly readings; discharge estimated on basis of 2 discharge measurements and weather records).

## Ptarmigan Creek at Lawing

Location.--Lat 60°24'20", long 149°21'45", on right bank 200 ft upstream from bridge on Seward-Anchorage Highway, 0.2 mile north of Lawing, 0.3 mile upstream from mouth, and 3 miles downstream from Ptarmigan Lake.

Drainage area.--32.6 sq mi.

Records available.--Discharge: May 1947 to September 1957.  
Chemical analyses: February to September 1952.

Gage.--Water-stage recorder. Altitude of gage is 500 ft (from topographic map). Prior to June 11, 1952, staff gage at site 200 ft downstream at different datum.

Average discharge.--10 years, 109 cfs (78,910 acre-ft per year).

Extremes.--Maximum discharge during year, 796 cfs Sept. 3 (gage height, 2.80 ft); maximum gage height recorded, 4.38 ft Dec. 18 (backwater from ice); minimum daily discharge, 13 cfs Mar. 25-30.

1947-57: Maximum discharge, 980 cfs June 29, 1953 (gage height, 3.28 ft); maximum gage height recorded, that of Dec. 18, 1956; minimum discharge not determined.

Remarks.--Records good except those for periods of ice effect, which are poor.

Discharge, in cubic feet per second, water year October 1956 to September 1957

\* Discharge measurement made on this day.

Note.--Stage-discharge relation affected by ice Nov. 5 to about Mar. 12 (no gage-height record Nov. 22 to Dec. 17, Dec. 22 to Mar. 12; discharge estimated on basis of 2 discharge measurements, weather records, and records for stations on nearby streams), Mar. 22 to Apr. 21.

## Grant Creek near Moose Pass

Location.--Lat 60°27'25", long 149°21'15", on right bank 0.3 mile upstream from mouth, 0.8 mile downstream from Grant Lake, and 2.3 miles south of Moose Pass.

Drainage area.--44.2 sq mi.

Records available.--September 1947 to September 1957.

Gage.--Water-stage recorder. Datum of gage is 491 ft above mean sea level (river-profile survey). Prior to July 1, 1952, staff gage at site 0.1 mile downstream at datum 7.23 ft lower.

Average discharge.--10 years, 193 cfs (139,700 acre-ft per year).

Extremes.--Maximum discharge during year, 1,700 cfs Sept. 3 (gage height, 4.06 ft), from rating curve extended above 1,100 cfs by logarithmic plotting; minimum not determined. 1947-57: Maximum discharge, 2,230 cfs June 28, 1953 (gage height, 4.46 ft), from rating curve extended above 1,100 cfs by logarithmic plotting; minimum not determined.

Remarks.--Records good except those for period of no gage-height record, which are poor.

Discharge, in cubic feet per second, water year October 1956 to September 1957

\* Discharge measurement made on this day.

Note.--No gage-height record Dec. 12 to Mar. 31 except occasional days (stage-discharge relation affected by ice during most of period); discharge estimated on basis of 2 discharge measurements, weather records, and records for nearby streams.

## Trail River near Lawing

Location.--Lat 60°26'00", long 149°22'20", near center of stream on downstream end of pier at bridge site on old Seward-Anchorage Highway, 0.2 mile upstream from Falls Creek, 0.2 mile downstream from Lower Trail Lake, 1.9 miles upstream from mouth, and 2.1 miles north of Lawing.

Drainage area.--195 sq mi.

Records available.--Discharge: May 1947 to September 1957.

Chemical analyses: November 1951 to September 1952.

Gage.--Water-stage recorder. Altitude of gage is 460 ft (from topographic map). Prior to Sept. 13, 1952, staff gage at same site and datum.

Average discharge.--10 years, 782 cfs (566,100 acre-ft per year).

Extremes.--Maximum daily discharge during year, 4,700 cfs Sept. 4; minimum discharge,

79 cfs Mar. 31 (gage height, 2.89 ft).

1947-57: Maximum discharge, 5,860 cfs June 28, 1953 (gage height, 10.16 ft); minimum daily, 48 cfs Feb. 9, 10, 1949.

Remarks.--Records good except those for period of no gage-height record, which are poor.

## ALASKA WEST OF LONGITUDE 141°

## Crescent Creek near Moose Pass

Location.--Lat 60°28'45", long 149°34'25", on left bank 90 ft downstream from Crescent Lake Outlet and 7 miles west of Moose Pass.

Drainage area.--21.4 sq mi.

Records available.--May to September 1957.

Gage.--Water-stage recorder. Datum of gage is 1,452.5 ft above mean sea level (river-profile survey).

Extremes.--Maximum discharge during period May to September, 210 cfs June 9; maximum gage height, 2.85 ft Sept. 15; minimum discharge, 31 cfs Aug. 19, 20 (gage height, 1.62 ft).

Remarks.--Records good except those for period of shifting-control, which are fair.

Note.--Shifting-control method used Sept. 4-30.

## Crescent Creek near Cooper Landing

Location.--Lat 60°29'50", long 149°40'40", on left bank at bridge on old Seward-Kenai Highway, 0.3 mile upstream from mouth and 5.3 miles east of Cooper Landing.

Drainage area.--31.7 sq mi.

Records available.--Discharge: July 1949 to September 1957.  
Chemical analyses: April to September 1952.

Gage.--Water-stage recorder. Altitude of gage is 550 ft (from topographic map). Prior to Aug. 19, 1949, staff gage at same site and datum.

Average discharge.--8 years, 70.4 cfs (50,970 acre-ft per year).

Extremes.--Maximum discharge during year, 342 cfs June 7 (gage height, 1.90 ft); maximum gage height recorded, 2.20 ft Nov. 2 (backwater from ice); minimum discharge recorded, 6 cfs Mar. 17, caused by storage behind ice jam upstream.  
1949-57: Maximum discharge, 820 cfs June 28, 1953; maximum gage height, 2.85 ft June 27, 1953; minimum discharge observed, 2.7 cfs Mar. 8, 1954 (discharge measurement), caused by storage behind ice jam upstream.

Remarks.--Records good except those for periods of backwater from debris or ice effect, which are fair, and those for period of no gage-height record, which are poor.

Discharge, in cubic feet per second, water year October 1956 to September 1957

\* Discharge measurement made on this day.

Note.--Stage-discharge relation affected by ice Oct. 29 to Nov. 2. No gage-height record Nov. 3 to Mar. 12 (stage-discharge relation affected by ice during most of period); discharge estimated on basis of 2 discharge measurements, weather records, and records for Cooper Creek near Cooper Landing. Backwater from debris Oct. 1-28, May 18 to June 11, Aug. 3-29.

## Kenai River at Cooper Landing

Location.--Lat 60°29'35", long 149°48'25", near center of span on downstream side of bridge on Sterling Highway, 0.9 mile east of Cooper Landing, 0.9 mile upstream from Bean Creek, and 1.2 miles downstream from Snug Harbor.

Drainage area.--634 sq mi.

Records available.--Discharge: May 1947 to September 1957.

Chemical analyses: October 1949, July to September 1950, April to September 1952.

Gage.--Wire-weight gage read once daily. Datum of gage is 429.27 ft above mean sea level (river-profile survey). May 11, 1947, to Mar. 10, 1949, staff gage and Mar. 11, 1949, to Apr. 13, 1950, wire-weight gage, at bridge 0.9 mile downstream at different datum.

Average discharge.--10 years, 2,666 cfs (1,930,000 acre-ft per year).

Extremes.--Maximum discharge during year, 16,300 cfs Sept. 6 (gage height, 11.15 ft), from rating curve extended above 10,000 cfs by logarithmic plotting; minimum daily, 260 cfs Mar. 29-31.

1947-57: Maximum discharge, 20,600 cfs June 29, 1953 (gage height, 12.36 ft, from graph based on gage readings), from rating curve extended above 10,000 cfs by logarithmic plotting; minimum daily, 190 cfs Mar. 15-24, 1951.

Remarks.--Records good except those for periods of ice effect, which are fair.

## Cooper Creek near Cooper Landing

Location.--Lat 60°26'00", long 149°49'15", on left bank 125 ft downstream from Cooper Lake Outlet, 1.4 miles upstream from Stetson Creek, and 4 miles south of Cooper Landing.

Drainage area.--31.8 sq mi.

Records available.--August 1949 to September 1957.

Gage.--Water-stage recorder. Datum of gage is 1,165.5 ft above mean sea level (river-profile survey).

Average discharge.--8 years, 86.0 cfs (62,260 acre-ft per year).

Extremes.--Maximum discharge during year, 316 cfs Sept. 4 (gage height, 2.67 ft); minimum not determined.

1949-57: Maximum discharge, 729 cfs June 29, 1953 (gage height, 4.02 ft); minimum not determined.

Remarks.--Records good except those for periods of no gage-height record, which are poor.

a No gage-height record; discharge estimated on basis of 2 discharge measurements, weather records, and records for Crescent Creek near Cooper Landing and Trail River near Lawing.

## South Fork Campbell Creek near Anchorage

Location.--Lat  $61^{\circ}09'55''$ , long  $149^{\circ}46'00''$ , in NW $\frac{1}{4}$  sec. 2, T. 12 N., R. 3 W., on right bank 20 ft downstream from bridge, 0.1 mile northeast of Campbell Airstrip, 2.2 miles upstream from North Fork Campbell Creek, and  $5\frac{1}{2}$  miles southeast of Anchorage.

Drainage area.--29.4 sq mi.

Records available.--July 1947 to September 1957.

Gage.--Water-stage recorder. Altitude of gage is 300 ft (from topographic map). Prior to Aug. 20, 1952, at site 70 ft upstream at different datum.

Average discharge.--10 years, 38.2 cfs (27,660 acre-ft per year).

Extremes.--Maximum discharge during year, 181 cfs Sept. 19 (gage height, 1.85 ft); maximum gage height observed, 2.70 ft Dec. 21 (backwater from ice); minimum daily, 6 cfs Jan. 22-25, Mar. 6-12.

1947-57: Maximum discharge, 891 cfs June 21, 1949 (gage height, 3.30 ft, site and datum then in use), from rating curve extended above 110 cfs by logarithmic plotting; minimum not determined.

Remarks.--Records good except those for periods of ice effect, which are fair.

Water year 1956-57: Max 129 Min 6 Mean 31.9 Ac-ft 23,110

Peak discharge (base, 150 cfs).--July 26 (10 a.m.) 155 cfs (1.69 ft); Sept. 19 (6:30 p.m.) 181 cfs (1.85 ft).

\* Discharge measurement made on this day.

Note.--Stage-discharge relation affected by ice Oct. 13 to Nov. 26, Nov. 29 to Apr. 30 (no gage-height record Oct. 17-21, Nov. 3-5, 7-20, 25, 26, Dec. 2 to Apr. 11, except on days of discharge measurements; discharge estimated on basis of 18 discharge measurements, weather records, and records for Ship Creek near Anchorage and Little Susitna River near Palmer).

## Ship Creek near Anchorage

Location.--Lat 61°13'25", long 149°38'00", in Fort Richardson Military Reservation, at new diversion dam and Fort Richardson water-supply intake building, 0.2 mile upstream from abandoned dam and water-supply intake building, 3.5 miles upstream from North Fork Ship Creek, and 8½ miles east of Anchorage.

Drainage area.--91.2 sq mi.

Records available.--Discharge: October 1946 to September 1957.

Chemical analyses: April 1949 to July 1951.

Water temperatures: May 1949 to September 1950.

Gage.--Water-stage recorder and masonry dam. Datum of gage is 530 ft above mean sea level (levels by Corps of Engineers). Oct. 1, 1946, to Apr. 30, 1947, staff gage and May 1, 1947, to Apr. 19, 1954, water-stage recorder, at site 0.2 mile downstream at different datum. June 18, 1953, to Sept. 30, 1954, supplementary water-stage recorder at site 2.7 miles downstream at different datum.

Average discharge.--11 years, 142 cfs (102,800 acre-ft per year).

Extremes.--Maximum discharge during year, 712 cfs June 4 (gage height, 2.99 ft); no flow for parts of several days.

1946-57: Maximum discharge, 1,860 cfs June 21, 1949 (gage height, 3.44 ft, site and datum then in use); no flow at times.

Remarks.--Records fair except those for period of ice effect, which are poor. Discharge data represent net flow remaining after diversion for water supply of Fort Richardson, Elmendorf Air Force Base, and city of Anchorage. Average diversion, 22.1 cfs.

Cooperation.--Gage inspected and records of diversion furnished by Office of Post Engineers, Fort Richardson.

Discharge, in cubic feet per second, water year October 1956 to September 1957

\* Discharge measurement made on this day.

Note.--Stage-discharge relation affected by ice Oct. 13 to Apr. 23 (no gage-height record Feb. 15-20, 24, 25, 27, 28; discharge estimated on basis of 2 discharge measurements and weather records).

## Eklutna Lake near Palmer

Location.--Lat 61°24'05", long 149°09'00", 100 ft upstream from dam at outlet of Eklutna Lake, 8 miles upstream from abandoned Eklutna power diversion dam, 11 miles upstream from mouth of Eklutna Creek, and 14 miles south of Palmer.

Drainage area.--119 sq mi.

Records available.--November 1946 to September 1957 (fragmentary since January 1955).

Gage.--Staff gage. Datum of gage is 859.8 ft above mean sea level (Corps of Engineers bench mark). Prior to May 5, 1947, reference point at same site and datum.

Extremes.--Maximum gage height observed during year, 10.63 ft Sept. 5; minimum observed, -22.45 ft May 17.

1946-57: Maximum gage height observed, 12.00 ft Sept. 18, 1951; minimum observed, that of May 17, 1957.

Remarks.--Outflow from lake controlled by stoplogs and sluice gates in dam at outlet. Gates fully open during flood season each year. Prior to December 1954, stored water released during winter period for power purposes. Since December 1954, direct withdrawals from Eklutna Lake for power purposes; flow then diverted into Knik River basin.

## Eklutna Creek near Palmer

Location.--Lat 61°24'05", long 149°09'00", on right bank 200 ft downstream from dam at outlet of Eklutna Lake, 8 miles upstream from abandoned Eklutna power diversion dam, 11 miles upstream from mouth, and 14 miles south of Palmer.

Drainage area.--119 sq mi.

Records available.--Discharge: October 1946 to September 1957.

Chemical analyses: April 1949 to September 1950, December 1950 to August 1952.

Water temperatures: May 1949 to September 1950, December 1950 to July 1951.

Gage.--Water-stage recorder. Datum of gage is 856.53 ft above mean sea level (Corps of Engineers bench mark). Prior to Aug. 31, 1948, staff gage at site 100 ft upstream at datum 1.96 ft higher. Aug. 31, 1948, to Sept. 30, 1953, at datum 1.96 ft higher.

Average discharge.--8 years (1946-54), 346 cfs (250,500 acre-ft per year), unadjusted.

Extremes.--Maximum discharge during year, 1,250 cfs Sept. 5 (gage height, 4.74 ft); no flow Oct. 8 to July 18.

1946-57: Maximum discharge, 2,530 cfs Sept. 18, 1951 (gage height, 8.06 ft in gage well, present datum); no flow for long periods since December 1954.

Remarks.--Records good except those for periods of no gage-height record, which are fair. Flow regulated by Eklutna Lake, usable capacity, 160,000 acre-ft. Since December 1954, entire flow, except for periods of spilling, diverted from Eklutna Lake into Knik River basin by Eklutna powerplant.

\* Discharge measurement or observation of no flow made on this day.

† Diversion above station, in acre-ft, for Eklutna powerplant; records furnished by Bureau of Reclamation.

\*\* Field estimate made on this day.

a No gage-height record; discharge estimated on basis of 2 field estimates and 1 discharge measurement.

## ALASKA WEST OF LONGITUDE 141°

## Caribou Creek near Sutton

Location.--Lat 61°48'10", long 147°41'00", on downstream side of left pier of bridge on Glenn Highway, 1.4 miles downstream from Dan Creek,  $\frac{1}{4}$  miles upstream from mouth, and 40 miles east of Sutton.

Drainage area.--289 sq mi.

Records available.--May 1955 to September 1957.

Gage.--Water-stage recorder. Datum of gage is 1,767 ft above mean sea level.

Extremes.--Maximum discharge recorded during year, 3,760 cfs June 2 (gage height, 5.37 ft), from rating curve extended by logarithmic plotting; minimum not determined.

1955-57: Maximum discharge 5,060 cfs June 18, 1955 (gage height, 5.92 ft), from rating curve extended above 1,500 cfs by logarithmic plotting; minimum observed, 0.23 cfs Mar. 9, 1956 (discharge measurement), caused by temporary storage upstream.

Remarks.--Records good except those for periods of ice effect or no gage-height record, which are poor.

Water year 1956-57: Max 2,600 Min - Mean 320 Ac-ft 231,600

Peak discharge (base, 2,000 cfs).--May 20 (9:30 p.m.) 2,150 cfs (4.47 ft); May 29 (10 p.m.) 2,290 cfs (4.57 ft); June 2 (8 p.m.) 3,760 cfs (5.37 ft); June 6 or 7 (time and discharge unknown); June 20 (11 p.m.) 3,420 cfs (5.20 ft); July 6 (2 a.m.) 2,790 cfs (4.85 ft).

\* Discharge measurement made on this day.  
a No gage-height record; discharge estimated on basis of 3 discharge measurements, weather records, and records for nearby streams.

Note.--Stage-discharge relation affected by ice Oct. 6 to May 13 (no gage-height records Oct. 8, Oct. 28 to Apr. 10, except occasional staff-gage readings, May 9; discharge estimated on basis of 9 discharge measurements, weather records, and records for nearby streams).

## Matanuska River at Palmer

Location.--Lat 61°36'35", long 149°04'15", in N½ sec. 34, T. 18 N., R. 2 E., or left bank 100 ft downstream from bridge on Glenn Highway and 1 mile east of Palmer.

Drainage area.--2,070 sq mi, approximately.

Records available.--Discharge: April 1949 to September 1957.

Chemical analyses: May 1949 to September 1950, April to June 1951, March to September 1952, April to July 1953.

Water temperatures: May 1949 to September 1950, March to August 1952, April to September 1953.

Sediment records: April to September 1953, April to September 1954.

Gage.--Water-stage recorder. Datum of gage is 170.92 ft above mean sea level (Alaska Road Commission bench mark). Prior to Nov. 2, 1950, wire-weight gage at bridge 120 ft upstream at same datum. Nov. 2, 1950, to Apr. 30, 1952, wire-weight gage at bridge 100 ft upstream at same datum.

Average discharge.--8 years, 4,143 cfs (2,999,000 acre-ft per year).

Extremes.--Maximum discharge during year, 25,900 cfs June 20 (gage height, 10.90 ft); minimum not determined.

1949-57: Maximum discharge, that of June 20, 1957; maximum gage height observed, 12.03 ft July 11, 1949; minimum daily discharge, 234 cfs Apr. 25, 1956.

Remarks.--Records fair except those for period of ice effect, which are poor. Large diurnal fluctuation caused by glacier melt at the source.

Discharge, in cubic feet per second, water year October 1956 to September 1957

Peak discharge (base, 16,500 cfs).--June 8 (5 a.m.) 21,500 cfs (10.52 ft); June 20 (1 p.m.) 25,900 cfs (10.90 ft); July 1 (2 a.m.) 17,400 cfs (9.88 ft); July 14 (4 a.m.) 17,300 cfs (9.91 ft).

\* Discharge measurement made on this day.

Note.--Stage-discharge relation affected by ice Oct. 16 to Apr. 30 (no gage-height record Oct. 25 to Nov. 12, Nov. 14 to Dec. 4, Dec. 6 to Jan. 1, Jan. 4-7, 12, 13, 24-27, Feb. 2, 6, 9, 10, 16, 17, 22-24, 27, Mar. 2-4, 7, 9-11, 23, 30, 31; discharge estimated on basis of 9 discharge measurements and weather records).

## Little Susitna River near Palmer

Location.--Lat 61°42'40", long 149°13'40", in NW<sup>1</sup> sec. 26, T. 19 N., R. 1 E., on left bank 15 ft downstream from highway bridge on Wasilla-Fishhook Road, 1.5 miles north of road junction, 1.8 miles downstream from unnamed tributary, and 8 miles northwest of Palmer.

Drainage area.--61.9 sq mi.

Records available.--July 1948 to September 1957.  
Chemical analyses: February to August 1952.

Gage.--Water-stage recorder. Datum of gage is 920.6 ft above mean sea level (river-profile survey). Prior to Aug. 16, 1948, staff gage at same site and datum.

Average discharge.--9 years, 208 cfs (150,600 acre-ft per year).

Extremes.--Maximum discharge during year, 2,510 cfs Sept. 19 (gage height, 6.11 ft); minimum daily, 8 cfs Mar. 11, 12.  
1948-57; Maximum discharge, 3,070 cfs June 21, 1949 (gage height, 6.33 ft); minimum not determined.

Remarks.--Records good except those for period of ice effect, which are poor. Large diurnal fluctuation caused by glacier melt at the source.

Peak discharge (base, 1,500 cfs).--Sept. 19 (9 a.m.) 2,510 cfs (6.11 ft).

\* Discharge measurement made on this day.

Note.--Stage-discharge relation affected by ice Oct. 16 to May 5 (no gage-height record Nov. 4-12, 14-26, Dec. 3 to Apr. 3, except occasional days; discharge estimated on basis of 11 discharge measurements, weather records, and records for Ship Creek near Anchorage).

## Susitna River near Denali, Alaska

Location.--Lat 63°04'40", long 147°31'20", on left bank 1.4 miles upstream from Butte Creek, 2.3 miles downstream from bridge on Denali Highway, 2.6 miles downstream from Windy Creek, and 7½ miles south of Denali.

Drainage area.--950 sq mi, approximately.

Records available.--May to September 1957.

Gage.--Water-stage recorder. Altitude of gage is 2,450 ft (from topographic map).

Extremes.--Maximum gage height during period, 5.54 ft from floodmarks (discharge not determined); minimum not determined.

Remarks.--Records poor.

\* Discharge measurement made on this day.

† Result of discharge measurement.

Note.--No gage-height record June 4 to July 9, July 11-23, July 26 to Aug. 12, Aug. 14-26; discharge estimated on basis of 3 discharge measurements, weather records, and records for station at Gold Creek.

## Susitna River at Gold Creek

Location.--Lat 62°46'15", long 149°41'20", on right bank 0.2 mile upstream from Gold Creek, 0.3 mile upstream from Alaska Railroad bridge, 1 mile north of Gold Creek Railroad Station, and 1.7 miles downstream from Indian River. Prior to June 6, 1957, at site 0.3 mile downstream.

Drainage area.--6,160 sq mi, approximately (includes that of Gold Creek).

Records available.--Discharge: August 1949 to September 1957.

Chemical analyses: May 1951 to October 1952, October to November 1953, June to September 1955, June 1956, June to September 1957.

Water temperatures: June to September 1957.

Sediment records: April to September 1952; 1953, 1955-57 (periodic).

Gage.--Water-stage recorder. Datum of gage is 676.50 ft above mean sea level. Prior to June 6, 1957, wire-weight gage at site 0.3 mile downstream at same datum.

Average discharge.--8 years, 9,816 cfs (7,106,000 acre-ft per year).

Extremes.--Maximum discharge during year, 42,200 cfs June 8 (gage height, 13.68 ft); minimum not determined.

1949-57: Maximum discharge observed, 58,100 cfs Aug. 26, 1955 (gage height, 14.20 ft), site then in use; maximum gage height observed, 24.48 ft May 10, 1954 (ice jam) site then in use; minimum discharge not determined.

Flood in May 1919 reached a stage of 19.2 ft, result of ice jam, from information by Bureau of Reclamation.

Remarks.--Records fair except those for periods of no gage-height record, which are poor.

Large diurnal fluctuation caused by glacier melt at source. Records of specific conductance of daily samples available in district office, Quality of Water Branch, Palmer, Alaska.

Water year 1956-57: Max 40,600 Min - Mean 10,380 Ac-ft 7,518,000

Peak discharge (base, 35,000 cfs).--June 8 (10 a.m.) 42,200 cfs (13.68 ft); July 26 (6 p.m.) 35,600 cfs (13.12 ft).

\* Discharge measurement made on this day.

\* Expressed in thousands.

Note.--No gage-height record Oct. 1 to May 26, except occasional readings (stage-discharge relation affected by ice during most of period), May 30 to June 2, Sept. 18-20, 25-27; discharge estimated on basis of 5 discharge measurements, weather records, and records for Mataruska River at Palmer.

## ALASKA WEST OF LONGITUDE 141°

## Uganik River near Kodiak

Location.--Lat 57°41'05", long 153°25'10", on Kodiak Island, on right bank half a mile upstream from tidewater of East Arm Uganik Bay, 1 mile downstream from Mush Lake tributary, 4 miles downstream from Uganik Lake, and 40 miles west of Kodiak.

Drainage area.--123 sq mi.

Records available.--May 1951 to September 1957.

Gage.--Water-stage recorder. Altitude of gage is 20 ft (from topographic map).

Average discharge.--6 years, 598 cfs (432,900 acre-ft per year).

Extremes.--Maximum discharge during year, 5,680 cfs June 10 (gage height, 8.41 ft), from rating curve extended above 1,400 cfs by logarithmic plotting; minimum not determined. 1951-57: Maximum discharge, 13,700 cfs Oct. 3, 1952 (gage height, 10.65 ft), from rating curve extended above 2,500 cfs by logarithmic plotting; minimum not determined.

Remarks.--Records good except those above 1,400 cfs and those for period of doubtful gage-height record, which are fair, and those for periods of ice effect or no gage-height record, which are poor.

Discharge, in cubic feet per second, water year October 1956 to September 1957

Water year 1956-57: Max 4,680 Min - Mean 527 Cfsm 4.28 In. 58.19 Cfsm 381,700

Peak discharge (base, 3,400 cfs).--June 10 (11 p.m.) 5,680 cfs (8.41 ft); Sept. 2 (7:30 a.m.) 5,530 cfs (8.29 ft); Sept. 12 (4 p.m.) 5,530 cfs (8.25 ft).

\* Discharge measurement made on this day.

b Stage-discharge relation affected by ice.

Note.--Doubtful gage-height record Mar. 4 to Apr. 22; discharge computed from recorded graph and weather records. No gage-height record Dec. 7 to Mar. 3 (stage-discharge relation affected by ice during part of period); discharge estimated on basis of 1 discharge measurement and weather records.

## Newhalen River near Iliamna

Location.--Lat 59°52', long 154°52', on left bank 1 mile upstream from rapids, 1 mile downstream from old portage dock, 8 miles downstream from Fish Village, 8 miles downstream from outlet of Sixmile Lake, and 8 miles north of Iliamna.

Drainage area.--3,300 sq mi, approximately.

Records available.--July 1951 to September 1957.

Gage.--Water-stage recorder. Altitude of gage is 210 ft (from topographic map).

Average discharge.--6 years, 8,865 cfs (6,418,000 acre-ft per year).

Extremes.--Maximum discharge during year, 25,100 cfs Sept. 15 (gage height, 7.05 ft); minimum not determined.

1951-57: Maximum discharge, 29,600 cfs July 1, 1953 (gage height, 8.03 ft); minimum not determined.

Remarks.--Records good except those for period of no gage-height record, which are poor.

Discharge, in cubic feet per second, water year October 1956 to September 1957

\* Discharge measurement made on this day.

Note.--No gage-height record Oct. 23 to June 6 (stage-discharge relation affected by ice during most of period); discharge estimated on basis of 2 discharge measurements, weather records, and records for nearby streams.

## Nuyakuk River near Dillingham

Location.--Lat 59°56', long 158°12', on left bank 1,000 ft downstream from outlet of Tikchik Lake, half a mile upstream from unnamed tributary, and 62 miles north of Dillingham.

Drainage area.--1,490 sq mi, approximately.

Records available.--May 1953 to September 1957.

Gage.--Water-stage recorder. Altitude of gage is 350 ft (from topographic map).

Extremes.--Maximum discharge during year, 16,000 cfs Sept. 18 (gage height, 4.61 ft); minimum not determined.

1953-57: Maximum discharge, 22,400 cfs July 15, 1955 (gage height, 6.11 ft); minimum not determined.

Remarks.--Records good except those for periods of ice effect or no gage-height record, which are poor.

Discharge, in cubic feet per second, water year October 1956 to September 1957

Water year 1956-57: Max 15,800 Min - Mean 4,857 Ac-ft 3,516,000

\* Discharge measurement made on this day.

Note.--No gage-height record Oct. 16 to May 18 (stage-discharge relation affected by ice during part of period), July 28 to Sept. 2; discharge estimated on basis of 3 discharge measurements and weather records.

## Kuskokwim River at Crooked Creek

Location.--Lat 61°52', long 158°07', on right bank at Parent's Trading Post, 0.2 mile upstream from Crooked Creek and 0.7 mile upstream from village of Crooked Creek.

Drainage area.--31,100 sq mi, approximately.

Records available.--Discharge: June 1951 to September 1957.

Chemical analyses: May to September 1957.

Water temperatures: May to September 1957.

Gage.--Staff gage read twice daily. Altitude of gage is 200 ft (from topographic map).

Average discharge.--6 years, 42,550 cfs (30,800,000 acre-ft per year).

Extremes.--Maximum discharge not determined, occurred May 7; minimum not determined.

1951-57: Maximum discharge not determined; maximum daily discharge, 280,000 cfs May 7, 1957; maximum gage height, 25.4 ft May 1, 1953 (ice jam), from floodmarks; minimum discharge not determined.

Remarks.--Records fair except those above 120,000 cfs and those for periods of ice effect or no gage-height record, which are poor. Records of specific conductance of daily samples available in district office, Quality of Water Branch, Palmer, Alaska.

Average .....

## Yukon River at Eagle

Location.--Lat 64°47'30", long 141°12'00", on left bank at Eagle, an eighth of a mile upstream from Mission Creek, 1.1 miles downstream from Castalia Creek, and 11 miles downstream from international boundary.

Drainage area.--113,500 sq mi, approximately.

Records available.--Discharge: January 1911 to December 1913, June 1950 to September 1957. Monthly discharge only for some periods, published in WSP 1372.

Chemical analyses: April to October 1951, June to September 1952.

Water temperatures: May to October 1951, June to August 1952.

Sediment records: July and October 1954, April and August 1955 (periodic).

Gage.--Water-stage recorder. Altitude of gage is 750 ft (from topographic map). January 1911 to December 1913 staff gage at site half a mile downstream at different datum. June 22, 1950, to Sept. 30, 1955, staff gage at site 1.1 miles upstream at present datum. Oct. 1, 1955, to Aug. 10, 1957, staff gage at present site and datum.

Average discharge.--9 years, 70,970 cfs (51,380,000 acre-ft per year).

Extremes.--Maximum discharge during year, 561,000 cfs May 30 (gage height, 23.01 ft), from rating curve extended above 230,000 cfs by logarithmic plotting; minimum not determined. 1911-13, 1950-57: Maximum discharge, that of May 30, 1957; minimum not determined.

Remarks.--Records fair except those for period of no gage-height record, which are poor.

Revisions (water years).--WSP 1372: 1911-14. drainage area.

Discharge, in cubic feet per second, water year October 1956 to September 1957

Water year 1956-57: Max 553,000 Min - Mean 88,390 Ac-ft 64,000,000

\* Discharge measurement made on this day.

† Expressed in thousands.

Note.--No gage-height record Oct. 9 to May 25 (stage-discharge relation affected by ice during most of period), June 12-16, July 14-30, Sept. 17-30; discharge estimated on basis of 4 discharge measurements, weather records, and records for stations at Rampart, Ruby, and near Kaltag.

## Yukon River at Rampart

Location.--Lat 65°31', long 150°11', on left bank at Rampart, half a mile downstream from Squaw Creek, 1½ miles downstream from Minook Creek, and 3½ miles upstream from Russian Creek.

Drainage area.--199,400 sq mi, approximately.

Records available.--Discharge: June 1955 to September 1957.

Chemical analyses: June to September 1954, June to October 1955, June to September 1956.

Water temperatures: June to August 1954, June, August, September 1955, May to September 1956.

Gage.--Staff gage read twice daily. Altitude of gage is 300 ft (from topographic map).

Extremes.--Maximum discharge during year, 686,000 cfs June 2 (gage height, 46.40 ft, from graph based on gage readings), from rating curve extended above 350,000 cfs by logarithmic plotting; minimum not determined.

1955-57: Maximum discharge, that of June 2, 1957; minimum not determined.

Remarks.--Records fair except those for periods of ice effect or no gage-height record, which are poor.

Discharge, in cubic feet per second, water year October 1956 to September 1957

\* Discharge measurement made on this day.

+ Expressed in thousands.

Note.--Stage-discharge relation affected by ice Oct. 6-31. No gage-height record Nov. 1 to May 20 (stage-discharge relation affected by ice during most of period); discharge estimated on basis of 2 discharge measurements, weather records, and records for other stations on the Yukon River.

## Tanana River at Northway Junction

Location.--Lat 63°00', long 141°48', near left bank on downstream side of bridge on highway from Northway Junction to Northway, half a mile southwest of Northway Junction and 4 miles upstream from Nabesna River.

Drainage area.--3,280 sq mi, approximately.

Records available.--Discharge: July 1949 to September 1957.

Sediment records: 1953-57 (periodic).

Gage.--Wire-weight gage read once daily. Datum of gage is 1,682.85 ft above mean sea level.

Average discharge.--8 years, 2,221 cfs (1,608,000 acre-ft per year).

Extremes.--Maximum discharge during year, 8,670 cfs July 12 (gage height, 11.70 ft); minimum not determined.

1949-57: Maximum discharge observed, 8,860 cfs Aug. 9, 1953 (gage height, 12.10 ft); minimum discharge not determined.

Remarks.--Records good except those for period of ice effect, which are poor. Large diurnal fluctuation caused by glacier melt at the source.

Discharge, in cubic feet per second, water year October 1956 to September 1957

## Tanana River near Tanacross

Location.--Lat 63°23'15", long 143°44'45", on left bank a quarter of a mile downstream from unnamed tributary, a quarter of a mile north of Cathedral Rapids, 8 miles upstream from Robertson River, and 13 miles west of Tanacross.

Drainage area.--8,550 sq mi, approximately.

Records available.--Discharge: June 1953 to September 1957.

Chemical analyses: December 1953 to October 1954, May to September 1957.

Water temperatures: June to September 1954, May to September 1957.

Sediment records: October 1953 to September 1954, October 1954 to September 1956 (periodic); May to September 1957.

Gage.--Water-stage recorder. Datum of gage is 1,489.58 ft above mean sea level.

Extremes.--Maximum discharge during year, 31,100 cfs July 26 (gage height, 10.23 ft); minimum not determined.

1953-57: Maximum discharge, 35,500 cfs Aug. 9, 1953 (gage height, 11.04 ft); minimum not determined.

Remarks.--Records good except those for periods of ice effect or no gage-height record, which are poor. Some diurnal fluctuation caused by glacier melt at the source. Records of specific conductance of daily samples available in district office of Quality of Water Branch, Palmer, Alaska.

a Daily mean discharge.

## Tanana River at Big Delta

Location.--Lat 64°09'20", long 145°51'00", on line between secs. 6 and 7, T. 9 S., R. 10 E., near left bank on downstream side of bridge on Richardson Highway, 0.5 mile northwest of Big Delta, half a mile upstream from Delta River, 8 miles downstream from Goodpaster River, and 75 miles southeast of Fairbanks.

Drainage area.--13,500 sq mi, approximately.

Records available.--Discharge: September 1948 to September 1952, October 1953 to September 1957 (discontinued).

Chemical analyses: May 1949 to September 1952.

Water temperatures: May 1949 to September 1951.

Gage.--Wire-weight gage read once daily. Datum of gage is 962.95 ft above mean sea level.

Average discharge.--8 years, 14,950 cfs (10,820,000 acre-ft per year).

Extremes.--Maximum discharge observed during year, 44,000 cfs July 16 (gage height, 21.99 ft); minimum daily, 3,720 cfs Apr. 7.

1948-52, 1953-57: Maximum discharge observed, 62,800 cfs July 29, 1949 (gage height, 23.57 ft); minimum daily, that of Apr. 7, 1957.

Remarks.--Records poor. Diurnal fluctuation caused by glacier melt at the source.

Discharge, in cubic feet per second, water year October 1956 to September 1957

## Salcha River near Salchaket

Location.--Lat 64°28'15", long 146°55'45", in sec. 22, T. 5 S., R. 4 E., near right bank on downstream side of bridge on Richardson Highway, half a mile east of Aurora Lodge, 2 miles upstream from mouth, and 6 miles southeast of Salchaket.

Drainage area.--2,170 sq mi, approximately.

Records available.--July 1909 to August 1910 (no winter records), published as "at mouth," October 1948 to September 1957.

Gage.--Water-stage recorder. Datum of gage is 631.85 ft above mean sea level. July 1909 to August 1910, staff gage at site 1 $\frac{1}{2}$  miles downstream at different datum. Sept. 7, 1948, to Apr. 24, 1953, wire-weight gage at present site and datum.

Average discharge.--9 years (1948-57), 1,741 cfs (1,260,000 acre-ft per year).

Extremes.--Maximum discharge during year, 28,200 cfs May 21 (gage height, 14.9 ft, from graph based on gage readings); minimum not determined.

1909-10, 1948-57: Maximum discharge, 36,500 cfs June 23, 1956 (gage height, 16.13 ft), from rating curve extended above 16,000 cfs by logarithmic plotting; minimum not determined.

Remarks.--Records good except those for periods of ice effect or no gage-height record, which are poor.

Discharge, in cubic feet per second, water year October 1956 to September 1957

Water year 1956-57: Max 26,500 Min - Mean 1,255 Ac-ft 908,500

Peak discharge (base, 10,000 cfs).--May 10 (6 p.m.) 14,100 cfs (11.73 ft); May 21 (time unknown) 28,200 cfs (14.9 ft).

\* Discharge measurement made on this day.

Note.--No gage-height record Oct. 1, 3, 4, Oct. 6 to Apr. 9 (stage-discharge relation affected by ice during most of period), May 22 to June 15, June 17, 18; discharge estimated on basis of 4 discharge measurements, weather records, and records for Chena River at Fairbanks. Stage-discharge relation affected by ice Apr. 10 to May 9.

## Chena River at Fairbanks

Location.--Lat 64°50'40", long 147°43'10", in NE<sub>1</sub> sec. 10, T. 1 S., R. 1 W., near right bank on upstream side of bridge on Cushman Street in Fairbanks, 0.4 mile downstream from Noyes Slough, 10 miles upstream from mouth, and 12 miles downstream from Chena Slough.

Drainage area.--1,980 sq mi, approximately (includes that of Noyes Slough).

Records available.--Discharge: July 1947 to September 1948 (no winter records), October 1948 to September 1957.

Chemical analyses: May to September 1953, April to September 1955.

Water temperatures: May to September 1953.

Sediment records: January to August 1954, April to September 1955 (periodic).

Gage.--Wire-weight gage read twice daily. Datum of gage is 423.68 ft above mean sea level. Prior to May 3, 1948, staff gage at same site and datum.

Average discharge.--9 years, 1,452 cfs (1,051,000 acre-ft per year).

Extremes.--Maximum discharge during year, 13,600 cfs May 23 (gage height, 9.12 ft); minimum not determined.

1947-57: Maximum discharge, 24,200 cfs May 21, 1948 (gage height, 14.17 ft, from graph based on gage readings); minimum not determined.

Flood in August 1930 reached a stage of about 14.2 ft, from information by local residents.

Flood of May 11-14, 1937, reached a stage of 14.9 ft, ice jam, from floodmarks.

Remarks.--Records good except those for periods of ice effect, no gage-height record, or shifting-control, which are poor. Records include flow in Noyes Slough, which diverts small quantity upstream from gage.

Calendar year 1956: Max 11,700 Min - Mean 1,719 Ac-ft 1,248,000

Water year 1956-57: Max 13,400 Min - Mean 1,066 Ac-ft 771,400

Peak discharge (base, 5,000 cfs).--May 11 (11:30 p.m.) 10,500 cfs (8.77 ft); May 23 (11:40 a.m.) 13,600 cfs (9.12 ft).

\* Discharge measurement made on this day.

Note.--No gage-height record Nov. 1 to Apr. 8 (stage-discharge relation affected by ice during entire period) May 26 to June 10; discharge estimated on basis of 2 discharge measurements, weather records, and records for Salcha River near Salchaket. Stage-discharge relation affected by ice Oct. 9-31, Apr. 9-30. Shifting-control method used Oct. 1-13, May 1-13.

## Nenana River near Healy

Location.--Lat 63°50'40", long 148°56'35", in W $\frac{1}{2}$  sec. 28, T. 12 S., R. 7 W., on right bank half a mile upstream from Healy Creek, 1.1 miles southeast of Healy, and 1.2 miles upstream from railroad bridge.

Drainage area.--1,910 sq mi, approximately.

Records available.--Discharge: October 1950 to September 1957.

Chemical analyses: October 1953 to September 1955, May 1956 to September 1957.

Water temperatures: May to September 1957.

Sediment records: 1953-57 (summer months only).

Gage.--Water-stage recorder. Altitude of gage is 1,280 ft (from topographic map).

Average discharge.--7 years, 3,608 cfs (2,612,000 acre-ft per year).

Extremes.--Maximum discharge during year, 21,000 cfs June 8 (gage height, 9.70 ft); minimum not determined.

1950-57: Maximum discharge, 28,500 cfs July 29, 1952; maximum gage height, 10.86 ft Aug. 25, 1955; minimum discharge not determined.

Remarks.--Records good except those for periods of ice effect or no gage-height record, which are poor. Some diurnal fluctuation caused by glacier melt at the source. Records of specific conductance of daily samples available in district office, Quality of Water Branch, Palmer, Alaska.

## Yukon River at Ruby

Location.--Lat 64°44'25", long 155°29'55", on left bank at Ruby, 300 ft downstream from Ruby Creek, 2 miles downstream from Melozitna River, and 2½ miles upstream from Ruby Slough.

Drainage area.--259,000 sq mi, approximately.

Records available.--October 1956 to September 1957.

Gage.--Staff gage read twice daily. Altitude of gage is 150 ft (from topographic map).

Extremes.--Maximum discharge during year, 753,000 cfs June 3 or 4 (gage height, 32.4 ft, from floodmarks), from rating curve extended above 570,000 cfs by logarithmic plotting; minimum not determined.

Remarks.--Records fair except those for periods of ice effect or no gage-height record, which are poor.

Discharge, in cubic feet per second, water year October 1956 to September 1957

\* Discharge measurement made on this day.

† Expressed in thousands.

‡ Stage-discharge relation affected by ice.

Note.--No gage-height record Oct. 25 to June 10 (stage-discharge relation affected by ice during most of period); discharge estimated on basis of 3 discharge measurements, weather records, and records for other Yukon River stations.

## ALASKA WEST OF LONGITUDE 141°

## Yukon River at Kaltag

Location.--Lat 64°16'00", long 158°41'45", on right bank at Civil Aeronautics Authority station airstrip, 1 mile downstream from Rodo River and 4.3 miles south of Kaltag.

Drainage area.--296,000 sq mi, approximately.

Records available.--October 1956 to September 1957.

Gage.--Staff gage read twice daily. Altitude of gage is 50 ft (from topographic map).

Extremes.--Maximum discharge during year, 1,020,000 cfs June 5 (gage height, 30.02 ft, from graph based on gage readings), from rating curve extended above 860,000 cfs by logarithmic plotting; minimum not determined.

Remarks.--Records poor.

† Expressed in thousands.

Note.--No gage-height record Oct. 1, Oct. 6 to May 27; discharge estimated on basis of 3 discharge measurements, weather records, and records for stations at Ruby and Rampart.

## DISCHARGE MEASUREMENTS AT POINTS OTHER THAN GAGING STATIONS

87

Measurements of streamflow in Alaska made at points other than regular gaging stations are given in the following table. Most of these measurements were made during periods of base flow when streamflow is primarily from ground-water storage. Measurements believed to have been made under base-flow conditions are identified by an asterisk (\*) to the left of the discharge figure. These measurements when correlated with the simultaneous discharge of a nearby stream where continuous records are available will give a picture of the low-flow potentiality of stream. The column headed, "Measured previously" shows the water years in which measurements were made at the same, or practically the same, site.

Discharge measurements made in Alaska at points other than gaging stations during water year 1957

Stream	Tributary to	Location	Drainage area (sq mi)	Measured previously (water years)	Date	Discharge (cfs)
<b>Southeastern Alaska</b>						
Delta (Ruth) Creek.	Thomas Bay...	Lat 58°48', long 132°47', at mouth, 13 miles northeast of Petersburg.	10.3	1947-53, 1955-56	Mar. 7	*7.01
Sheep Creek..	Gastineau Channel.	Lat 58°18'20", long 134°19'10", 50 ft above diversion dam, 1.0 mile above mouth, and 4 miles southeast of Juneau.	4.57	1951-53, 1954	Mar. 8	*6.81
